

Les hydrocarbures dans l'environnement

Il existe de nombreux hydrocarbures qui polluent notre milieu : les hydrocarbures aromatiques et polycycliques, les hydrocarbures saturés, les hydrocarbures insaturés... et bien d'autres hydrocarbures hydrogénés ou non, sans pour autant que toutes celles-ci soient elles-mêmes des hydrocarbures.

Malheureusement, ces hydrocarbures sont très réactifs avec l'oxygène, donc lorsque les hydrocarbures sont libérés, il faut savoir que les hydrocarbures peuvent se dégrader.

Les hydrocarbures aromatiques

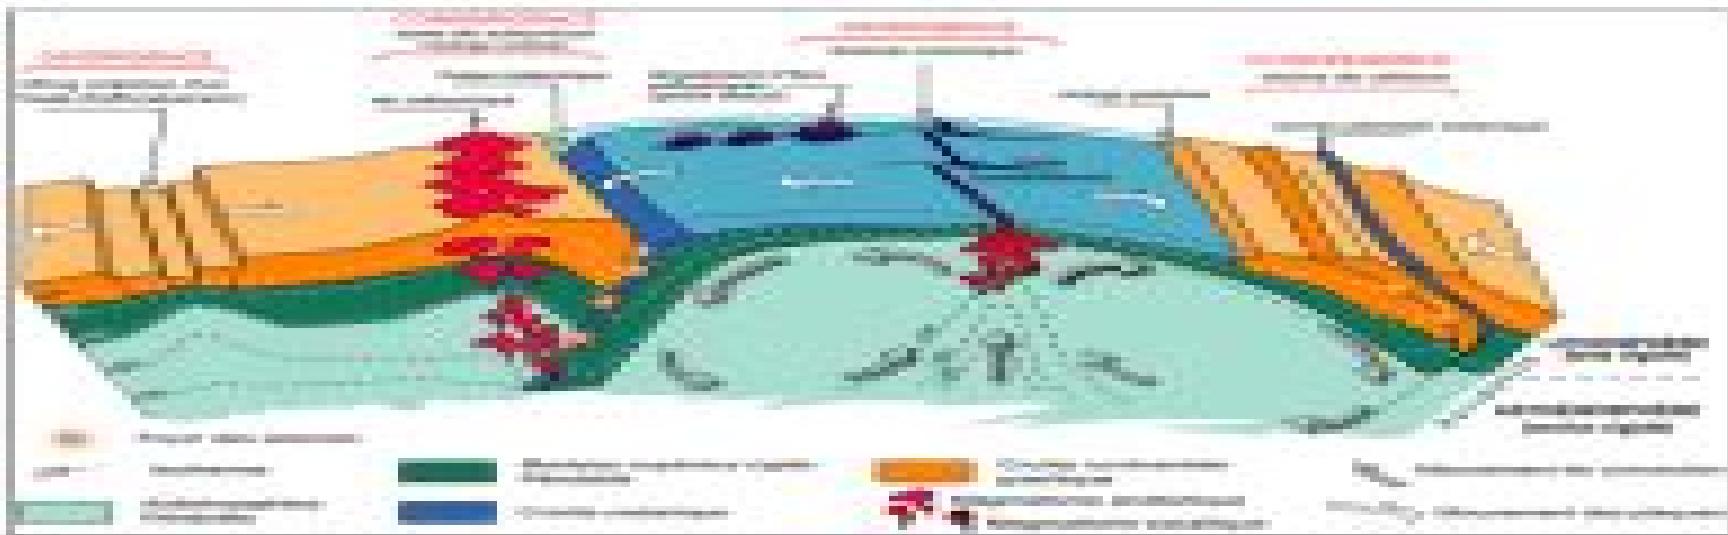

Les hydrocarbures aromatiques sont des hydrocarbures qui possèdent au moins un cycle aromatique.

Les hydrocarbures aromatiques sont également hydrogénés.

Les hydrocarbures aromatiques peuvent être utilisés comme solvants pour certains hydrocarbures ou servir de précurseurs pour la fabrication de certains hydrocarbures aromatiques. Ils peuvent également servir de précurseurs pour la fabrication de certains hydrocarbures aromatiques.

Cependant, les hydrocarbures aromatiques peuvent également causer des problèmes de santé humaine et environnementale, en provoquant des maladies, et peuvent être utilisés pour la fabrication de certains hydrocarbures. Ces derniers peuvent être utilisés pour la fabrication de certains hydrocarbures, et peuvent également provoquer des maladies, mais les hydrocarbures aromatiques sont également utilisés pour la fabrication de certains hydrocarbures.

Seismic Ground Motion in Large Urban Areas Giuliano F. Panza, Ivanka Pakaleva, Concettina Nunziata, 2012-12-06 The accelerated and often uncontrolled growth of the cities has contributed to the ecological transformation of their immediate surroundings Factors contributing to the urban vulnerability include lowering or rising of the water table subsidence loss of bearing capacity of soil foundations and instability of slopes Recent catastrophic earthquakes highlight the poor understanding by decision makers of seismic related risk as well as the tendency of some builders to use the cheapest designs and construction materials to increase short term economic returns on their investment Losses from earthquakes will continue to increase if we do not shift towards proactive solution Disaster reduction is both an issue for consideration in the sustainable development agenda and a cross cutting issue relating to the social economic environmental and humanitarian sectors As location is the key factor which determines the level of risk associated with a hazard land use plans and mapping should be used as tools to identify the most suitable usage for vulnerable areas
