Scientific Conversations Interviews On Science From The New York Times:

Scientific Conversations Claudia Dreifus, 2002-11-01 In these thirty eight interviews originally published in the weekly Science Times section of The New York Times Claudia Dreifus brings all of her colorful personality to bear on her subjects as well as an arsenal of philosophy literature and current events and an unmistakable curiosity As each conversation unfolds we learn surprising and fascinating things about some of the most intriguing figures and issues in science today Dreifus's outsider status in the world of science is perhaps one of her greatest interviewing strengths A political journalist for much of her career she stumbled into a position at the Science Times section With little more scientific background than the average person she scrambled to prepare for her meetings with some of the greatest minds in a broad range of disciplines from astronomy to geology from biology and medicine to computer science and mathematics She soon found herself in a refreshingly candid environment so unlike the one she had known on the political beat It is from this perspective that she makes science tangible accessible and entertaining

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology

and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

The Gene Wars Robert M. Cook-Deegan, 1994 Cook Deegan a former director of the Biomedical Ethics Advisory Committee of the US Congress and an advisor to the National Center for Human Genome Research gives a firsthand account of the struggle to launch the Human Genome Project Using primary documents and interviews Cook Deegan explains scientific details chronicles the origins of the project covers the conflicts and partnerships between the organizations involved and examines ethical legal and social issues of DNA research Includes bandw photos Annotation copyright by Book News Inc Portland OR **The Co-Presidency of Bush and Cheney** Shirley Anne Warshaw, 2009-04-14 This analysis of the Bush administration reveals how the president willingly ceded power to a calculating vice president with disastrous consequences Under the relatively inexperienced president George W Bush Dick Cheney was perhaps the most powerful vice president in American history In this excellently documented work presidential scholar Shirley Anne Warshaw debunks the popular myth that Bush s authority was hijacked or stolen Instead drawing on extensive research as well as personal interviews with White House Staffers and Washington insiders she demonstrates how Bush and Cheney operated as nothing

less than co presidents While Bush focused on building what he called a moral and civil society anchored by a war on science and by the proliferation of faith based programs he allowed Cheney to lead in business and foreign policy Warshaw highlights Cheney s decades long career in Washington and his familiarity with its inner workings to present a complete picture of this calculating political powerhouse From Cheney s unprecedented merging of presidential and vice presidential authority to his abhorrence of what he deemed congressional interference Warshaw paints an intriguing and at times frightening portrait

Kevles, 2000-01-17 You read with a rising sense of despair and outrage and you finish it as if awakening from a nightmare only Kafka could have conceived Christopher Lehmann Haupt New York Times David Baltimore won the Nobel Prize in medicine in 1975 Known as a wunderkind in the field of immunology he rose quickly through the ranks of the scientific

community to become the president of the distinguished Rockefeller University Less than a year and a half later Baltimore resigned from his presidency citing the personal toll of fighting a long battle over an allegedly fraudulent paper he had collaborated on in 1986 while at MIT From the beginning the Baltimore case provided a moveable feast for those eager to hold science more accountable to the public that subsidizes its research Did Baltimore stonewall a legitimate government inquiry Or was he the victim of witch hunters The Baltimore Case tells the complete story of this complex affair reminding us how important the issues of government oversight and scientific integrity have become in a culture in which increasingly complicated technology widens the divide between scientists and society

China's Cold War Science Diplomacy Gordon Barrett, 2022-08-25 During the early decades of the Cold War the People's Republic of China remained outside much of mainstream international science Nevertheless Chinese scientists found alternative channels through which to communicate and interact with counterparts across the world beyond simple East West divides By examining the international activities of elite Chinese scientists Gordon Barrett demonstrates that these activities were deeply embedded in the Chinese Communist Party's wider efforts to win hearts and minds from the 1940s to the 1970s Using a wide range of archival material including declassified documents from China's Ministry of Foreign Affairs Archive Barrett provides fresh insights into the relationship between science and foreign relations in the People's Republic of China

[Higher Education?](#) Andrew Hacker, Claudia Dreifus, 2010-08-03 What's gone wrong at our colleges and universities and how to get American higher education back on track A quarter of a million dollars It's the going tab for four years at most top tier universities Why does it cost so much and is it worth it Renowned sociologist Andrew Hacker and New York Times writer

Claudia Dreifus make an incisive case that the American way of higher education now a 420 billion per year business has lost sight of its primary mission the education of young adults Going behind the myths and mantras they probe the true performance of the Ivy League the baleful influence of tenure an unhealthy reliance on part time teachers and the supersized bureaucracies which now have a life of their own As Hacker and Dreifus call for a thorough overhaul of a self indulgent system they take readers on a road trip from Princeton to Evergreen State to Florida Gulf Coast University revealing those faculties and institutions that are getting it right and proving that teaching and learning can be achieved and at a much more reasonable price

Science in Culture Stephen R. Graubard, 2018-04-27 Twenty five years ago Gerald Holton's Thematic Origins of Scientific Thought introduced a wide audience to his ideas Holton argued that from ancient times to the modern period an astonishing feature of innovative scientific work was its ability to hold simultaneously deep and opposite commitments of the most fundamental sort Over the course of Holton's career he embraced both the humanities and the sciences Given this background it is fitting that the explorations assembled in this volume reflect both individually and collectively Holton's dual roots In the opening essay Holton sums up his long engagement with Einstein and his thematic commitment to unity The next two essays address this concern In historicized form Lorraine Daston returns the question of the scientific imagination to the Enlightenment period when both sciences and art feared imagination Daston argues that the split whereby imagination was valued in the arts and loathed in the sciences is a nineteenth century divide James Ackerman on Leonardo da Vinci meshes perfectly with Daston's account showing a form of imaginative intervention where it is irrelevant to draw analogies between art and science Historians of religion Wendy Doniger and Gregory Spinner pursue the imagination into the bedroom with literary theological representations Science culture and the imagination also intersect with biologist Edward Wilson and physicist Steven Weinberg Both tackle the big question of the unity of knowledge and worldviews from a scientific perspective while art historian Ernst Gombrich does the same from the perspective of art history To emphasize the nitty gritty of scientific practice chemists Bretislav Fredrich and Dudley Herschbach provide a remarkable historical tour at the boundary of chemistry and physics In the concluding essay historian of education Patricia Albjerg Graham addresses pedagogy head on In these various reflections on science art literature philosophy and education this volume gives us a view in common a deep and abiding respect for Gerald Holton's contribution to our understanding of science in culture Peter Galison is Mallinckrodt Professor of History of Science and of physics at Harvard University Stephen R. Graubard is editor of the American Academy of Arts and Sciences and its journal *Daedalus* and professor of history emeritus at Brown University Everett Mendelsohn is director of the History of Science Program at Harvard University

Totally Random Tanya Bub, Jeffrey Bub, 2018-08-21 An eccentric comic about the central mystery of quantum mechanics *Totally Random* is a comic for the serious reader who wants to really understand the central mystery of quantum mechanics entanglement what it is what it means and what you can do with it Measure two entangled particles separately and the

outcomes are totally random But compare the outcomes and the particles seem as if they are instantaneously influencing each other at a distance even if they are light years apart This in a nutshell is entanglement and if it seems weird then this book is for you Totally Random is a graphic experiential narrative that unpacks the deep and insidious significance of the curious correlation between entangled particles to deliver a gut feel glimpse of a world that is not what it seems See for yourself how entanglement has led some of the greatest thinkers of our time to talk about crazy sounding stuff like faster than light signaling many worlds and cats that are both dead and alive Find out why it remains one of science's most paradigm shaking discoveries Join Niels Bohr's therapy session with the likes of Einstein Schrödinger and other luminaries and let go of your commonsense notion of how the world works Use your new understanding of entanglement to do the seemingly impossible like beat the odds in the quantum casino or quantum encrypt a message to evade the Sphinx's all seeing eye But look out or you might just get teleported back to the beginning of the book A fresh and subversive look at our quantum world with some seriously funny stuff Totally Random delivers a real understanding of entanglement that will completely change the way you think about the nature of physical reality
