Mind, Meaning and Scientific Explanation John-Michael Kuczynski, A comprehensive treatise on analytic philosophy with special attention paid to the theoretical basis of psychopathology Familiar Science, Or, the Scientific Explanation of the Principles of Natural and Physical Science David Ames Wells, 1856 Four Decades of Scientific Explanation Wesley C. Salmon, 2006-06-15 As Aristotle stated scientific explanation is based on deductive argument yet Wesley C Salmon points out not all deductive arguments are qualified explanations The validity of the explanation must itself be examined Four Decades of Scientific Explanation provides a comprehensive account of the developments in scientific explanation that transpired in the last four decades of the twentieth century It continues to stand as the most comprehensive treatment of the writings on the subject during these years Building on the historic 1948 essay by Carl G Hempel and Paul Oppenheim Studies in the Logic of Explanation which introduced the deductive nomological D N model on which most work on scientific explanation was based for the following four decades Salmon goes beyond this model's inherent basis of describing empirical knowledge to tell us not only what but also why Salmon examines the predominant models in chronological order and describes their development refinement and criticism or rejection Four Decades of Scientific Explanation underscores the need for a consensus of approach and ongoing evaluations of methodology in scientific explanation with the goal of providing a better understanding of natural phenomena *Language and scientific explanation* Eran Asoulin, 2020-06-19 This book discusses the two main construals of the explanatory goals of semantic theories The first externalist conception understands semantic theories in terms of a hermeneutic and interpretive explanatory project The second internalist conception understands semantic theories in terms of the psychological mechanisms in virtue of which meanings are generated It is argued that a fruitful scientific explanation is one that aims to uncover the underlying mechanisms in virtue of which the observable phenomena are made possible and that a scientific semantics should be doing just that If this is the case then a scientific semantics is unlikely to be externalist for reasons having to do with the subject matter and form of externalist theories It is argued that semantics construed hermeneutically is nevertheless a valuable explanatory project **Language and Scientific Research** Wenceslao J. Gonzalez, 2021-04-27 This book analyzes the role of language in scientific research and develops the semantics of science from different angles The philosophical investigation of the volume is divided into four parts which covers both basic science and applied science I The Problem of Reference and Potentialities of the Language in Science II Language and Change in Scientific Research Evolution and Historicity III Scientific Language in the Context of

Truth and Fiction and IV Language in Mathematics and in Empirical Sciences Language plays a key role in science our access to the theoretical practical or evaluative dimensions of scientific activity begins with the mastery of language continues with a deepening in the use of language and reaches the level of contribution when it creates new terms or changes them in sense and reference This reveals the compatibility between objectivity in semantic contents and historicity in the progress of science This volume is a valuable enrichment to students academics and other professionals interested in science in all its forms who seek to deepen the role that language plays in its structure and dynamics

Methodological Prospects for Scientific Research Wenceslao J. Gonzalez, 2020-10-30 This book highlights the existence of a diversity of methods in science in general in groups of sciences natural social or the artificial and in individual sciences This methodological variety is open to a number of consequences such as the differences in the research according to levels of reality micro meso and macro which leads to multi scale modelling and to questioning fundamental parts in the sciences understood as the necessary support for the whole discipline In addition this volume acknowledges the need to assess the efficacy of procedures and methods of scientific activity in engendering high quality results in research made the relevance of contextual factors for methodology of science the existence of a plurality of stratagems when doing research in empirical sciences natural social and of the artificial and the need for an ethical component while developing scientific methods because values should have a role in scientific research The book is of interest to a broad audience of philosophers academics in various fields graduate students and research centers interested in methodology of science
