Lin, 2010-11-18 Robotics is at the cusp of dramatic transformation Increasingly complex robots with unprecedented autonomy are finding new applications from medical surgery to construction to home services Against this background the algorithmic foundations of robotics are becoming more crucial than ever in order to build robots that are fast safe reliable and adaptive Algorithms enable robots to perceive plan control and learn The design and analysis of robot algorithms raise new fundamental questions that span computer science electrical engineering mechanical engineering and mathematics These algorithms are also finding applications beyond robotics for example in modeling molecular motion and creating digital characters for video games and architectural simulation The Workshop on Algorithmic Foundations of Robotics WAFR is a highly selective meeting of leading researchers in the field of robot algorithms Since its creation in 1994 it has published some of the field s most important and lasting contributions This book contains the proceedings of the 9th WAFR held on December 13 15 2010 at the National University of Singapore The 24 papers included in this book span a wide variety of topics from new theoretical insights to novel applications *Advances in Mechanism and Machine Science* Tadeusz Uhl, 2019-06-13 This book gathers the proceedings of the 15th IFToMM World Congress which was held in Krakow Poland from June 30 to July 4 2019 Having been organized every four years since 1965 the Congress represents the world s largest scientific event on mechanism and machine science MMS The contributions cover an extremely diverse range of topics including biomechanical engineering computational kinematics design methodologies dynamics of machinery multibody dynamics gearing and transmissions history of MMS linkage and mechanical controls robotics and mechatronics micro mechanisms reliability of machines and mechanisms rotor dynamics standardization of terminology sustainable energy systems transportation machinery tribology and vibration Selected by means of a rigorous international peer review process they highlight numerous exciting advances and ideas that will spur novel research directions and foster new multidisciplinary collaborations **Advanced Robotics**, 1995 Computing Techniques for Robots Igor Aleksander, 2012-12-06 I ALEKSANDER Kobler Unit for Information Technology Management Imperial College of Science and Technology London England It is now over half a decade since

Joseph Engelberger wrote Given a six articulation arm of any configuration software can be powerful enough to think only in tool coordinates That is a programmer concerns himself only with the tool on the end of the robot arm He can think of the tool s frame of reference and com puter subroutines automatically make the various articulations move so as to accomplish the desired tool manipulation As is often the case with statements of this kind they are appealing and generally well founded in technological feasibility But in order to turn the prediction into reality it requires the dedication and in ventiveness of an international community of researchers The object of this book is to provide a window on to some of the advances made by this community which go towards the fulfilment of Engelberger s predictions A significant factor in the framework within which this work is being pursued is the phenomenal advance in the availability of inex pensive and highly compact computing power It becomes increas ingly possible to imagine powerful microprocessors providing local intelligence at key points in a robot arm Uoints gripper etc by being connected through a communications network and controlled by some specially designated supervisory microchip

Computer Aided Analysis and Optimization of Mechanical System Dynamics E. J. Haug, 2013-06-29 These proceedings contain lectures presented at the NATO NSF ARO sponsored Advanced Study Institute on Computer Aided Analysis and Optimization of Mechanical System Dynamics held in Iowa City Iowa 12 August 1983 Lectures were presented by free world leaders in the field of machine dynamics and optimization Participants in the Institute were specialists from throughout NATO many of whom presented contributed papers during the Institute and all of whom participated actively in discussions on technical aspects of the subject The proceedings are organized into five parts each addressing a technical aspect of the field of computational methods in dynamic analysis and design of mechanical systems The introductory paper presented first in the text outlines some of the numerous technical considerations that must be given to organizing effective and efficient computational methods and computer codes to serve engineers in dynamic analysis and design of mechanical systems Two substantially different approaches to the field are identified in this introduction and are given attention throughout the text The first and most classical approach uses a minimal set of Lagrangian generalized coordinates to formulate equations of motion with a small number of constraints The second method uses a maximal set of cartesian coordinates and leads to a large number of differential and algebraic constraint equations of rather simple form These fundamentally different approaches and associated methods of symbolic computation numerical integration and use of computer graphics are addressed throughout the proceedings
