Biomimetic Research for Architecture and Building Construction Jan Knippers, Klaus G. Nickel, Thomas Speck, 2016-12-19

This book comprises a first survey of the Collaborative Research Center SFB TRR 141 Biological Design and Integrative Structures Analysis Simulation and Implementation in Architecture funded by the Deutsche Forschungsgemeinschaft since October 2014 The SFB TRR 141 provides a collaborative framework for architects and engineers from the University of Stuttgart biologists and physicists from the University of Freiburg and geoscientists and evolutionary biologists from the University of Tübingen The program is conceptualized as a dialogue between the disciplines and is based on the belief that that biomimetic research has the potential to lead everyone involved to new findings far beyond his individual reach During the last few decades computational methods have been introduced into all fields of science and technology In architecture they enable the geometric differentiation of building components and allow the fabrication of porous or fibre based materials with locally adjusted physical and chemical properties Recent developments in simulation technologies focus on multi scale models and the interplay of mechanical phenomena at various hierarchical levels In the natural sciences a multitude of quantitative methods covering diverse hierarchical levels have been introduced These advances in computational methods have opened a new era in biomimetics local differentiation at various scales the main feature of natural constructions can for the first time not only be analysed but to a certain extent also be transferred to building construction Computational methodologies enable the direct exchange of information between fields of science that until now have been widely separated

As a result they lead to a new approach to biomimetic research which hopefully contributes to a more sustainable development in architecture and building construction

Ethnography in the Open Science and Digital Age: New Debates, Dilemmas, and Issues Colin Jerolmack,Alexandra Murphy ,Victoria Reyes,2024-06-19 In the current moment ethnography is caught up in a number of debates that have led ethnographers to reflect on classic methodological and ethical dilemmas in new ways The replication crisis had led to a movement for open science e g registering hypotheses in advance sharing codes and data but it seems unclear that recommended best practices are appropriate to ethnography It s even up for debate whether ethnography is more of a social science or a genre The fact that many ethnographies are widely read invites questions and criticisms from beyond the ivory tower including our subjects about the ethics of representation e g who has license to write about whom and the extent to which journalistic standards of data verification and transparency e g fact checking naming sources should apply to qualitative research Some ethnographers are calling for more open critical discussions about the embodied dimensions of fieldwork including not only emotions but also issues like sexual intimacy and harassment There s also a growing expectation that ethnographers empower our subjects to represent and analyze themselves What s more as more of social life is lived online it becomes increasingly unclear where the boundaries of the field site should be drawn and whether ethnographic conventions can be applied wholesale to the study of digital spaces
