Microstructure of Fine-Grained Sediments Richard H. Bennett, 1991 Knowledge of basic clay microstructure is fundamental to an understanding of the physical chemical and mechanical properties of fine grained sediments and rocks This compilation of fifty nine peer reviewed papers examines clay microstructure in detail with comprehensive sections focusing on microstructure signatures environmental processes modeling measurement techniques and future research recommendations Many of these topics are discussed in light of geological and engineering applications such as hazardous waste disposal construction techniques and drilling programs The field of clay microstructure is developing rapidly The concepts observations and principles presented in this book will help stimulate new thought and be a spring board for exciting new research

Management of Bottom Sediments Containing Toxic Substances, 1980 **Sound Velocity, Elasticity, and Related Properties of Marine Sediments, North Pacific** Edwin Lee Hamilton, 1969 *Physics of Sound in Marine Sediments* Lloyd Hampton, 2013-03-09 The phenomenon of sound transmissions through marine sediments is of extreme interest to both the United States civilian and Navy research communities Both communities have conducted research within the field of this phenomenon approaching it from different perspectives The academic research community has approached it as a technique for studying sedimentary and crustal structures of the ocean basins The Navy research community has approached it as an additional variable in the predictability of sound transmission through oceanic waters In order to join these diverse talents with the principal aim of bringing into sharp focus the state of the science in the problems relating to the behavior of sound in marine sediments the Office of Naval Research organized and sponsored an invited symposium on this subject The papers published in this volume are the results of this symposium and mark the frontiers in the state of the art The symposia series were based on five research areas identified by ONR as being particularly suitable for critical review and for the appraisal of future research trends These areas include 1 Physics of Sound in Marine Sediments 2 Physical and Engineering Properties of Deep Sea Sediments 3 The Role of Bottom Currents in Sea Floor Geological Processes 4 Nephelometry and the Optical Properties of the Ocean I later S Natural Gases in Marine Sediments and Their Mode of Distribution These five areas also form some of the research priorities of the ONR program in Marine Geology and Geophysics

River Sand Mining Modelling and Sustainable Practice Raj Kumar Bhattacharya, Nilanjana Das Chatterjee, 2021-07-31 Worldwide demand for sand and gravel is increasing daily as the need for these materials continues to rise for example in the construction sector in land filling and for transportation sector based infrastructural projects This results in over extraction of sand from channel beds and hampers the natural renewal of sediment geological setup and morphological processes of the riverine system In India illegal sand mining of alluvial channels and gravel mining of perennial channels are two anthropogenic issues that negatively affect the sustainable drainage system Along the Kangsabati River in India the consequences of sand mining are very serious The construction of Mukutmonipur Dam 1958 on the river causes huge sediment deposition along the middle and downstream areas these same areas are also intensely mined for sand

instream and on the flood plain Geospatial models are applied in order to better understand the state and the resilience of stream hydraulics morphological and river ecosystem variables during pre mining and post mining stages using micro level datasets of the Kangsabati River The book also includes practicable measures to minimize the environmental consequences of instream mining in respect to optimum sand mining It discusses the threshold limits of each variable in stream hydraulics morphological and river ecological regime and also discusses the most affected variables Consequently all outputs will be very useful for students researchers academicians decision makers and practitioners and will facilitate applying these techniques to create models for other river basins
