

1. AIM

An aim is a statement of purpose. When starting a project, you need to know what you want to fix, find out or improve.

An aim is thus about what you intend to do.

At the very start of your report, you need to write down:

TO DETERMINE/FIND OUT/INVESTIGATE... (pick one)

2. QUESTION

Once you have your great idea, you need to focus: ask a question about something you see.

A good place to start is **How, what, where, who, when and why**. On your report, write:

What is the relationship between x & y ?

3. HYPOTHE- SIS

A hypothesis is a prediction about how you think your project works.

Your aim, question, hypothesis and your conclusion are all related; your hypothesis answers your investigative question.

You can write:

If x changes like so, then y will change accordingly...

x = INDEPENDENT VARIABLE y = DEPENDENT V

6. COMMUNICATE

Tell people about your project!

Collect all your information in a file! Follow all the steps of an experimental report and place it in the file. Remember to include the little attributes from #4.

Summarise your project on a poster or a powerpoint presentation.

This must be neat!

FALSE

FORM A NEW HYPOTHESIS AND START AGAIN

TRUE

TEST IN A DIFFERENT WAY

5. ANALYSE

TABULATE THE CHANGES, PUT IT ON A GRAPH AND LOOK FOR THE TREND OR RELATIONSHIP. ENSURE THAT YOU MEASURE CAREFULLY AND PUT THE DATA DOWN A LINE THROUGH THE PUT POINTS IN THE LINE OF BEST FIT.

Example	
x	y
1	2
2	4
3	6
4	8
5	10
6	12
7	14
8	16
9	18
10	20

Counts

x (UNIT)

4. EXPERIMENT

Test your hypothesis by doing some experiments.

Your experiment test whether your hypothesis is true or not. Ensure that only your independent & dependent variables change. Everything else have to stay the same (called the controlled variables).

Repeat your experiments many times to see if your results are reliable.

Always make note of your method & results in a little attribute.

Scientific Method Physical Science Texts:

Scientific Inquiry and Nature of Science Lawrence Flick, N.G. Lederman, 2007-11-03 This book synthesizes current literature and research on scientific inquiry and the nature of science in K 12 instruction Its presentation of the distinctions and overlaps of inquiry and nature of science as instructional outcomes are unique in contemporary literature Researchers and teachers will find the text interesting as it carefully explores the subtleties and challenges of designing curriculum and instruction for integrating inquiry and nature of science

How We Teach Science John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they ve advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual s intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public

Integrated Science Nima Rezaei, 2021-06-16 *Integrated Science* Science without Borders is the first volume of the INTEGRATED SCIENCE Book series aiming to publish the results of the most updated ideas and reviews in transdisciplinary fields and to highlight the integration of discrete disciplines including formal sciences physical chemical sciences and engineering biological sciences medical sciences and social sciences This volume primarily focuses on the research involving the integration of two or more academic fields offering an innovative borderless view which is one of the main focuses of the Universal Scientific Education and Research Network USERN The whole world is suffering from complex problems these are borderless problems thus a borderless solution could merely solve such complex issues Transdisciplinarity is a domain that researchers work jointly using a shared conceptual framework drawing together disciplinary specific theories concepts and approaches to address common problems Lack of confidence lack of expertise complexities of healthcare the confusing nature of healthcare environments and lack of organization and standardization are the obstacles of successful scientific communication Consequently this book provides an overview of the essential elements of transdisciplinary studies and integrated science The unique aspect of this book privileging it from other books is covering all aspects of science as harmonies of a single symphony

Scientific Methodology in Nineteenth Century Britain Charles H. Pence, 2025-09-25 This collection of primary sources examines scientific methodology in Britain during the long nineteenth century The nineteenth century begins with what was still a largely Newtonian perspective on the nature of matter and the physical world Newtonian bodies moving through space guided by a collection of forces with gravity foremost among them By the end of the century physical science had refocused itself around the concept of energy the first moves toward the understanding of atomic structure had been undertaken and electricity and magnetism were understood in terms of fields of force This volume examines primary sources related to the philosophy of the physical sciences and will be of great interest to students of the history of philosophy and the history of science

Making 20th Century Science Stephen G. Brush, Ariel Segal, 2015

Historically the scientific method has been said to require proposing a theory making a prediction of something not already known testing the prediction and giving up the theory or substantially changing it if it fails the test A theory that leads to several successful predictions is more likely to be accepted than one that only explains what is already known but not understood This process is widely treated as the conventional method of achieving scientific progress and was used throughout the twentieth century as the standard route to discovery and experimentation But does science really work this way In Making 20th Century Science Stephen G Brush discusses this question as it relates to the development of science throughout the last century Answering this question requires both a philosophically and historically scientific approach and Brush blends the two in order to take a close look at how scientific methodology has developed Several cases from the history of modern physical and biological science are examined including Mendeleev's Periodic Law Kekule's structure for benzene the light quantum hypothesis quantum mechanics chromosome theory and natural selection In general it is found that theories are accepted for a combination of successful predictions and better explanations of old facts Making 20th Century Science is a large scale historical look at the implementation of the scientific method and how scientific theories come to be accepted

Man and the Social Sciences (Routledge Revivals) William Alexander Robson,2014-02-04 One of the most significant movements in the world of learning in the twentieth century was the rise and development of the social sciences However few attempts have been made to see how far social scientists have travelled on the road to studying and understanding human society First published in 1972 the lectures reprinted in this book aim to trace the development of the social sciences during the twentieth century and to show the role of the London School of Economics and Political Science in this development since it was founded in 1895 Each of the very distinguished lecturers was asked to take the larger view to be critical where necessary to treat his subject in the context of the world of learning

The result is a survey of exceptional interest in which the growth of the social sciences is analysed from a number of contrasting viewpoints each of which ranges widely and often with provocative brilliance over themes that are of general concern The introduction by Professor W A Robson which was not part of the original lecture series is in itself a critical assessment of the field that will be read with close attention *Increasing Educational Productivity Through Improving the Science Curriculum* Senta A.
