Scientific Realism A Critical Reappraisal:

Scientific Realism N Rescher,1987-08-31 *Scientific Realism* N. Rescher,1987-08-31 The increasingly lively controversy over scientific realism has become one of the principal themes of recent philosophy 1 In watching this controversy unfold in the rather technical way currently in vogue it has seemed to me that it would be useful to view these contemporary disputes against the background of such older epistemological issues as fallibilism scepticism relativism and the traditional realism idealism debate This then is the object of the present book which will recon sider the newer concerns about scientific realism in the context of these older philosophical themes Historically realism concerns itself with the real existence of things that do not meet the eye with suprasensible entities that lie beyond the reach of human perception In medieval times discussions about realism focused upon universals Recognizing that there are physical objects such as cats and triangular objects and red tomatoes the medievels debated whether such abstract objects as cathood and triangularity and redness also exist by way of having a reality indepen dent of the concretely real things that exhibit them Three fundamen tally different positions were defended 1 Nominalism Abstracta have no independent existence as such they only exist in and through the objects that exhibit them Only particulars individual substances exist Abstract objects are existents in name only mere thought fictions by whose means we address concrete particular things 2 Realism Abstracta have an independent existence as such **Resisting Scientific Realism** K. Brad Wray,2018-11 Provides a spirited defence of anti realism in philosophy of science Shows the historical evidence and logical challenges facing scientific realism *Varieties of Scientific Realism* Evandro Agazzi,2017-03-08 This book offers a comprehensive update on the scientific realism debate enabling readers to gain a novel appreciation of the role of objectivity and truth in science and to understand fully the various ways in which antirealist conceptions have been subjected to challenge over recent decades Authoritative representatives of different philosophical traditions explain their perspectives on the meaning and validity of scientific realism and describe the strategies being adopted to counter persisting antirealist positions The coverage extends beyond the usual discussion of realism within the context of the natural sciences and especially physics to encompass also its applicability in mathematics logic and the human sciences The book will appeal to all with an interest in the recent realist epistemologies of science the nature of current philosophical debate and the ongoing rehabilitation of truth as the legitimate goal of scientific research

Philosophy of Language and the Challenge to Scientific Realism Christopher Norris,2004-06-02 In this book Christopher Norris develops the case for scientific realism by tackling various adversary arguments from a range of anti realist positions Through a close critical reading he shows how they fail to make adequate sense on any rational consistent and scientifically informed survey of the evidence Along the way he incorporates a number of detailed case studies from the history and philosophy of science Norris devotes much of his discussion to some of the most prominent and widely influential source texts of anti realism Also included are the sophisticated versions of verificationism developed albeit in very different ways by

thinkers such as Michael Dummett and Bas van Fraassen Central to Norris's argument is a prolonged engagement with the once highly influential but nowadays neglected work of Norwood Russell Hanson This book will be welcomed especially by readers who possess some knowledge of the background debate and who wish to deepen and extend their understanding of these issues beyond an introductory level *The Oxford Handbook of Philosophy of Science* Paul Humphreys, 2016-08-04 This handbook provides both an overview of state of the art scholarship in philosophy of science as well as a guide to new directions in the discipline Section I contains broad overviews of the main lines of research and the state of established knowledge in six principal areas of the discipline including computational physical biological psychological and social sciences as well as general philosophy of science Section II covers what are considered to be the traditional topics in the philosophy of science such as causation probability models ethics and values and explanation Section III identifies new areas of investigation that show promise of becoming important areas of research including the philosophy of astronomy and astrophysics data complexity theory neuroscience simulations post Kuhnian philosophy post empiricist epistemology and emergence Most chapters are accessible to scientifically educated non philosophers as well as to professional philosophers and the contributors all leading researchers in their field bring diverse perspectives from the North American European and Australasian research communities This volume is an essential resource for scholars and students

Metamodernism Jason Ananda Josephson Storm, 2021-06-07 Not only an astute diagnosis of the confusions and contradictions of contemporary thought it also offers compelling alternatives Rita Felski author of *Hooked Art and Attachment* For decades scholars have been calling into question the universality of disciplinary objects and categories The coherence of defined autonomous categories such as religion science and art has collapsed under the weight of postmodern critiques calling into question the possibility of progress and even the value of knowledge Jason nanda Josephson Storm aims to radicalize and move beyond these deconstructive projects to offer a path forward for the humanities and social sciences using a new model for theory he calls metamodernism Metamodernism works through the postmodern critiques and uncovers the mechanisms that produce and maintain concepts and social categories In so doing Storm provides a new radical account of society's ever changing nature what he calls a Process Social Ontology and its materialization in temporary zones of stability or social kinds Storm then formulates a fresh approach to philosophy of language by looking beyond the typical theorizing that focuses solely on human language production showing us instead how our own sign making is actually on a continuum with animal and plant communication Storm also considers fundamental issues of the relationship between knowledge and value promoting a turn toward humble emancipatory knowledge that recognizes the existence of multiple modes of the real Metamodernism is a revolutionary manifesto for research in the human sciences that offers a new way through postmodern skepticism to envision a more inclusive future of theory in which new forms of both progress and knowledge can be realized

Realism in the Sciences Igor Douven, Leon Horsten, 1996 This book contains ten papers that were presented at the

symposium about the realism debate held at the Center for Logic Philosophy of Science and Philosophy of Language of the Institute of Philosophy at the Katholieke Universiteit Leuven on 10 and 11 March 1995 The first group of papers are directly concerned with the realism anti realism debate in the general philosophy of science This group includes the articles by Ernan McMullin Diderik Batens Joke Meheus Igor Douven and Herman de Regt The papers of the second group concentrate on specific problems arising from the realism anti realism debate Theo Kuipers contribution discusses the problem of truth approximation Roger Vergauwen s article pertains to the issue of realism in the philosophy of mind and semantics Jaap van Brakel s article focusses on the relation between everyday concepts and scientific concepts and on the theory dependence of observation Paul Cortois investigates the relation between the question of realism and Kuhn s concept of incommensurability between scientific theories The final group contains two papers on the realism anti realism debate in the special sciences James Cushing discusses the problem of underdetermination in quantum mechanics and Jean Paul van Bendegem addresses the question of the possibility of an empiricist philosophy of mathematics

Truth Matters Christopher Norris, 2019-08-06
Truth Matters is the first full length introduction to the philosophical issue of response dependence

Reflexive Epistemology D. Zolo, 2012-12-06 Professor Danilo Zolo has written an account of Otto Neurath s epistemology which deserves careful reading by all who have studied the development of 20th century philosophy of science Here we see the philosophical Neurath in his mature states of mind the vigorous critic the scientific Utopian the pragmatic realist the sociologist of physics and of language the unifier and encyclopedist always the empiricist and always the conscience of the Vienna Circle Zolo has caught the message of Neurath s ship at sea in the reflexivity of language and he has sensibly explicated the persisting threat posed by consistent conventionalism And then Zolo beautifully articulates of the epistemological priority of sociology the provocative theme Was Neurath correct Did he have his finger on the pulse of empiricism in the time of a genuine unity of the sciences His friends and colleagues were unable to follow all the way with him but Danilo Zolo has done so in this stimulating investigation of what he tellingly calls Otto Neurath s philosophical legacy

Beauty and Revolution in Science James W. McAllister, 2018-09-05
Explaining why he embraced the theory of relativity the Nobel Prize winning theoretical physicist P A M Dirac stated It is the essential beauty of the theory which I feel is the real reason for believing in it How reasonable and rational can science be when its practitioners speak of revolutions in their thinking and extol certain theories for their beauty James W McAllister addresses this question with the first systematic study of the aesthetic evaluations that scientists pass on their theories Using a wealth of other examples McAllister explains how scientists aesthetic preferences are influenced by the empirical track

record of theories describes the origin and development of aesthetic styles of theorizing and reconsiders whether simplicity is an empirical or an aesthetic virtue of theories McAllister then advances an innovative model of scientific revolutions in opposition to that of Thomas S Kuhn Three detailed studies demonstrate the interconnection of empirical performance beauty and revolution One examines the impact of new construction materials on the history of architecture Another reexamines the transition from the Ptolemaic system to Kepler s theory in planetary astronomy and the third documents the rise of relativity and quantum theory in the twentieth century

Faces of Medicine W.J. van der Steen,P.J. Thung,2012-12-06 1

MEDICINE Illness disease and disability plague man in every culture But the form they take is not the same everywhere Neither is man s reaction Coping strategies and the experience and knowledge backing them depend very much on cultural setting So medicine the fabric of strategy and know ledge can only be understood in the context of culture In western society today severe judgements are passed on medicine Its store of knowledge and experience and its repertory of strategies have grown immensely during the last few decades But it hardly alleviates dominant ailments especially chronic diseases diseases of old age and disturbances of social and mental functioning We know that these ailments have come to the fore as the incidence of more primitive diseases declined in industrial societies Infant deaths and malnutrition and infections striking at young age have dwindled to marginal significance in Western Europe and life expectancy at birth is twice that of some 150 years ago Thus our new troubles are connected with past successes

Knowledge and Reality P. Parrini, 2013-11-11 XIV The stability of a philosophical construction will depend not only upon the solidity of the blocks of the pillars and architraves that make it up but also upon the way in which all these parts are connected Of course it will not be possible to argue for every single part of a philosophical building to do so would mean to embark in a virtually endless enterprise Accordingly some of the parts of a philosophical building will have to be taken from the literature on the subject as ready made or semi finished elements while others will be argued for in the course of building This is what happened in my work too In some cases for in stance in the case of epistemic relativism my concern was to illustrate theses which I believed to be sufficiently consolidated rather than to argue for them In other cases where I was directly engaged in building the theory that I want to formulate I did exactly the opposite This is what I have tried to achieve for example for those proper architraves of my construction viz the connection between scepticism and metaphysical realism and the thesis of the nonnative value of the fundamental epistemological notions truth objectivity and rationality

Handbook of Philosophy of Management Cristina Neesham, Markus Reihlen, Dennis Schoeneborn, 2022-12-01 The Handbook of Philosophy of Management addresses the philosophical foundations of management in theory and practice It covers established branches of philosophy such as aesthetics

epistemology moral philosophy political and social philosophy philosophy of education philosophy of practice and philosophy of science The Handbook's broad scope maps out the field and provides a forum where philosophy can be meaningfully applied to the study of management in all its forms The original peer reviewed research published here sheds new light on the complexities of management theory and practice beyond what hitherto has been possible with the sole application of the social sciences As philosophy provides a meta framework for moving beyond paradigm fragmentation within management research and education this allows researchers and practitioners to find harmony and discord in the perspectives revealed by a philosophical lens

Creativity Rob Pope, 2005-04-15 Creativity Theory History Practice offers important new perspectives on creativity in the light of contemporary critical theory and cultural history Innovative in approach as well as argument the book crosses disciplinary boundaries and builds new bridges between the critical and the creative It is organised in four parts Why creativity now offers much needed alternatives to both the Romantic stereotype of the creator as individual genius and the tendency of the modern creative industries to treat everything as a commodity defining creativity creating definitions traces the changing meaning of create from religious ideas of divine creation from nothing to advertising notions of concept creation It also examines the complex history and extraordinary versatility of terms such as imagination invention inspiration and originality creation as myth story metaphor begins with modern retellings of early African American and Australian creation myths and picking up Biblical and evolutionary accounts along the way works round to scientific visions of the Big Bang bubble universes and cosmic soup creative practices cultural processes is a critical anthology of materials chosen to promote fresh thinking about everything from changing constructions of literature and design to artificial intelligence and genetic engineering Rob Pope takes significant steps forward in the process of rethinking a vexed yet vital concept all the while encouraging and equipping readers to continue the process in their own creative or re creative ways Creativity Theory History Practice is invaluable for anyone with a live interest in exploring what creativity has been is currently and yet may be
