Personality Psychology Nathan Brody, Howard Ehrlichman, 1998
This book presents personality from the perspective of existing research It provides an overview of personality research and demonstrates the relationship between research and real individuals Readers are encouraged to explore the relationship between the research and their own personalities It also introduces primary source literature in personality psychology by covering the content methods and issues in the journals with minimal jargon

Personality Psychology The Science of Individuality presents content on its own merits rather than forcing it to fit existing theories Readers avoid the sometimes inaccurate connections to historical theories found in other books on personality The book also includes discussions often neglected in other books such as entire separate chapters on intelligence and cognitive style the unconscious and evolutionary personality psychology Readers will learn important areas in enough depth to appreciate the issues and complexities The book always attempts to make clear why a particular study is important This may facilitate the readers ability to study the subject further Chapter Two includes a short personality questionnaire designed to measure the Big 5 factors Since discussions of methodology refer back to the Big 5 factors throughout the book readers benefit by having a personal involvement through their scores on the questionnaire It may also help to make some of the material personally relevant A valuable book for any reader interested in understanding the existing research into personality or who wishes to understand more about his or her own personality
