A Changing Climate for Science Sophie C. Lewis, 2017-05-08 This book offers a critical exploration of first hand experiences of practicing climate science It tackles the pivotal question of what precisely constitutes contemporary scientific practice The author offers an insider's account of the experience of undertaking scientific training and of practicing as a climate scientist in order to examine the gulf between the way that science is perceived and pursued Lewis delves into this discrepancy drawing on personal experiences recent scientific studies extreme climatic events and political controversies The book begins by considering the relevance of key concepts such as knowability credibility authority and objectivity to the practice of climate science The following chapters argue that these concepts alone are limiting to our critical understanding climate science and climate change The book then proposes a new view of scientific practice appropriate for diverse disciplines by arguing that concepts such as transparency and curiosity are equally important to scientific practice as the more familiar key concepts introduced at the start of the book This book will appeal to climate scientists social scientists and those interested in the challenges posed by future climate change

Science and Synthesis, 2012-12-06 This volume is a collection of the lectures and discussions at an international colloquium organized by Unesco on the theme of Science and Synthesis to mark the occasion of the 10th anniversary of the death of both Einstein and Teilhard de Chardin also the 50th anniversary of the theory of general relativity Despite the great gulf which lies between the work of Einstein and Teilhard de Chardin the coincidence in the dates provided an opportunity to examine the urge towards a synthesis of the scientific and philosophical approaches which lies at the very heart of the work of these two great men It was indeed their common desire for an all embracing concept of the universe which led them both to try to construct a cosmology for the modern world So it seemed that the best way of honoring Einstein and Teilhard de Chardin was to arrange a free discussion of the current likelihood of effecting a synthesis of scientific knowledge which would bring together some of today's most eminent scholars inspired by the wish to make their research more meaningful by philosophic reflection The resulting give and take of ideas would go far beyond mere commemoration it would bring their ideas to life by setting them against the present state of science

Design Science Research Aline Dresch, Daniel Pacheco Lacerda, José Antônio Valle Antunes Jr, 2014-08-19 Consolidating existing knowledge in Design Science, this book proposes a new research method to aid the exploration of design and problem solving within business, science and technology. It seeks to overcome a dichotomy that exists in the field between theory and practice to enable researchers to find solutions to problems rather than focusing on the explanation and exploration of the problems themselves. Currently, researchers concentrate on describing, exploring, explaining and predicting phenomena and little attention is devoted to prescribing solutions. Herbert Simon proposes the need to develop a Science of the Artificial, Design Science, arguing that our reality is much more artificial than natural. However, the research conducted on the Design Science premises has so far been scattered and erratic in different fields of research such as management, systems, information and engineering. This book aims to address this issue by bringing these fields together and emphasising the need for solutions. This book provides a valuable resource to students and researchers of research methods, information systems, management and management science and production and operations management.

Creativity, Psychology and the History of Science H.E. Gruber, Katja Bödeker, 2005-09-22 Creativity, Psychology and the History of Science offers for the first time a comprehensive overview of the oeuvre of Howard E. In the contributions to creativity research, Gruber proposes his key ideas for studying creative work. Gruber focuses on how the thinking, motivation and affect of extraordinarily creative individuals evolve and how they interact over long periods of time. Gruber's approach bridges many disciplines and subdisciplines in psychology and beyond, several of which are represented in the present volume: cognitive psychology, developmental psychology, history of science, aesthetics and politics. The volume thus presents a unique and comprehensive contribution to our understanding of the creative process. Many of Gruber's papers have not
