**Scientists Confront Velikovsky** Donald Goldsmith, 1977      **Scientists Confront Scientists Who Confront Velikovsky** Velikovsky, 1978-10-01      **Impact!** Gerrit L. Verschuur, 1997-12-18

Most scientists now agree that some sixty five million years ago an immense comet slammed into the Yucatan detonating a blast twenty million times more powerful than the largest hydrogen bomb punching a hole ten miles deep in the earth Trillions of tons of rock were vaporized and launched into the atmosphere For a thousand miles in all directions vegetation burst into flames There were tremendous blast waves searing winds showers of molten matter from the sky earthquakes and a terrible darkness that cut out sunlight for a year enveloping the planet in freezing cold Thousands of species of plants and animals were obliterated including the dinosaurs some of which may have become extinct in a matter of hours In **Impact** Gerrit L Verschuur offers an eye opening look at such catastrophic collisions with our planet Perhaps more important he paints an unsettling portrait of the possibility of new collisions with earth exploring potential threats to our planet and describing what scientists are doing right now to prepare for this awful possibility Every day something from space hits our planet Verschuur reveals In fact about 10 000 tons of space debris fall to earth every year mostly in meteoric form The author recounts spectacular recent sightings such as over Allende Mexico in 1969 when a fireball showered the region with four tons of fragments and the twenty six pound meteor that went through the trunk of a red Chevy Malibu in Peekskill New York in 1992 the meteor was subsequently sold for 69 000 and the car itself fetched 10 000 But meteors are not the greatest threat to life on earth the author points out The major threats are asteroids and comets The reader discovers that astronomers have located some 350 NEAs Near Earth Asteroids objects whose orbits cross the orbit of the earth the largest of which are 1627 Ivar 6 kilometers wide and 1580 Betula 8 kilometers Indeed we learn that in 1989 a bus sized asteroid called Asclepius missed our planet by 650 000 kilometers a mere six hours and that in 1994 a sixty foot object passed within 180 000 kilometers half the distance to the moon Comets of course are even more deadly Verschuur provides a gripping description of the small comet that exploded in the atmosphere above the Tunguska River valley in Siberia in 1908 in a blinding flash visible for several thousand miles every tree within sixty miles of ground zero was flattened He discusses Comet Swift Tuttle the most dangerous object in the solar system a comet far larger than the one that killed off the dinosaurs due to pass through earth s orbit in the year 2126 And he recounts the collision of Comet Shoemaker Levy 9 with Jupiter in 1994 as some twenty cometary fragments struck the giant planet over the course of several days casting titanic plumes out into space when Fragment G hit it outshone the planet on the infrared band and left a dark area at the impact site larger than the Great Red Spot In addition the author describes the efforts of Spacewatch and other groups to locate NEAs and evaluates the idea that comet and asteroid impacts have been an underrated factor in the evolution of life on earth Astronomer Herbert Howe observed in 1897 While there are not definite data to reason from it is believed that an encounter with the nucleus of one of the largest comets is not to be desired As

Verschuur shows in *Impact* we now have substantial data with which to support Howe's tongue-in-cheek remark. Whether discussing monumental tsunamis or the innumerable comets in the Solar System, this book will enthrall anyone curious about outer space, remarkable natural phenomenon or the future of the planet earth. **The Oxford Handbook of Indigenous American Literature**

James Howard Cox, Daniel Heath Justice, 2014. Over the course of the last twenty years, Native American and Indigenous American literary studies has experienced a dramatic shift from a critical focus on identity and authenticity to the intellectual, cultural, political, historical, and tribal nation contexts from which these Indigenous literatures emerge. The Oxford Handbook of Indigenous American Literature reflects on these changes and provides a complete overview of the current state of the field. The Handbook's forty-three essays, organized into four sections, cover oral traditions, poetry, drama, non-fiction, fiction, and other forms of Indigenous American writing from the seventeenth through the twenty-first century. Part I attends to literary histories across a range of communities, providing, for example, analyses of Inuit, Chicana/o, Anishinaabe, and M'is literary practices. Part II draws on earlier disciplinary and historical contexts to focus on specific genres as authors discuss Indigenous non-fiction, emergent trans-Indigenous autobiography, Mexican and Spanish poetry, Native drama in the U.S. and Canada, and even a new Indigenous children's literature canon. The third section delves into contemporary modes of critical inquiry to expound on politics of place, comparative Indigenism, trans-Indigenism, Native rhetoric, and the power of Indigenous writing to communities of readers. A final section thoroughly explores the geographical breadth and expanded definition of Indigenous American through detailed accounts of literature from Indian Territory, the Red Atlantic, the far North, Yucatán, Amerika Samoa, and Francophone Quebec. Together, the volume is the most comprehensive and expansive critical handbook of Indigenous American literatures published to date. It is the first to fully take into account the last twenty years of recovery and scholarship and the first to most significantly address the diverse range of texts, secondary archives, writing traditions, literary histories, geographic and political contexts, and critical discourses in the field.

*The Iatrogenics Handbook: A Critical Look at Research & Practice in the Helping Professions* Robert F. Morgan, 2005

Paranormal Borderlands of Science Kendrick Frazier, 2023-10-17. Headlines and television news reports feature accounts of reincarnation, the predictions of astrologers, and psychic miracles. Citizens report UFO sightings. Police departments call on psychics to provide clues in baffling crimes. From every available information source, the public is bombarded with unsubstantiated claims of paranormal phenomena. How much of the evidence is reliable? What is the truth behind these claims? *Paranormal Borderlands of Science* is an exciting, well-informed examination of the most publicized and exotic claims of astrology, ESP, psychokinesis, precognition, UFOs, biorhythms, and other phenomena. Written by respected psychologists, astronomers, and other scientists, philosophers, investigative journalists, and magicians, the 47 articles in this superb collection present a skeptical treatment of pseudoscientific claims, an aspect often sorely neglected in sensationalized media reports. This book is an effort to help readers sort fact from fiction and sense from nonsense among the astonishing variety of

assertions labeled paranormal Never before published in book form the essays in this anthology originally appeared in the Skeptical Inquirer a leading magazine devoted to the critical investigation of pseudoscience from a scientific viewpoint Among the contributors are Isaac Asimov distinguished science fiction author Martin Gardner Scientific American columnist James Randi The Amazing Randi Philip Klass noted UFO skeptic Scot Morris Omni and James Obergruber NASA An essential contribution to skeptical literature this book will be of lasting value to all those wishing to balance the case for paranormal claims by reading the dissenting critics      Groovy Science David Kaiser, W. Patrick McCray, 2016-05-31 Did the Woodstock generation reject science or re create it An enthralling study of a unique period in scientific history New Scientist Our general image of the youth of the late 1960s and early 1970s is one of hostility to things like missiles and mainframes and plastics and an enthusiasm for alternative spirituality and getting back to nature But this enlightening collection reveals that the stereotype is overly simplistic In fact there were diverse ways in which the era's countercultures expressed enthusiasm for and involved themselves in science of a certain type Boomers and hippies sought a science that was both small scale and big picture as exemplified by the annual workshops on quantum physics at the Esalen Institute in Big Sur or Timothy Leary's championing of space exploration as the ultimate high Groovy Science explores the experimentation and eclecticism that marked countercultural science and technology during one of the most colorful periods of American history Demonstrate that people and groups strongly ensconced in the counterculture also embraced science albeit in untraditional and creative ways Science Each essay is a case history on how the hippies repurposed science and made it cool For the academic historian Groovy Science establishes the deep mark on American culture made by the countercultural innovators For the non historian the book reads as if it were infected by the hippies democratic intent no jargon few convoluted sentences clear arguments and a sense of delight Nature In the late 1960s and 1970s the mind expanding modus operandi of the counterculture spread into the realm of science and sh t got wonderfully weird Neurophysiologist John Lilly tried to talk with dolphins Physicist Peter Phillips launched a parapsychology lab at Washington University Princeton physicist Gerard O'Neill became an evangelist for space colonies Groovy Science is a new book of essays about this heady time Boing Boing      **Gonzo Science** Jim Richardson, Allen Richardson, True believers and skeptics beware what you know about science may be wrong Science commentators Jim and Allen Richardson are more faithful than the believers and more skeptical than the skeptics and they're funnier too      The Anguished Dawn James P. Friedlander, 2018-03-05 Scientific discoveries are constantly in the news Almost daily we hear about new and important breakthroughs But sometimes it turns out that what was trumpeted as scientific truth is later discredited or controversy may long swirl about some dramatic claim What is a nonscientist to believe

Many books debunk pseudoscience and some others present only the scientific consensus on any given issue In *At the Fringes of Science* Michael Friedlander offers a careful look at the shadowlands of science What makes Friedlander's book especially useful is that he reviews conventional scientific method and shows how scientists examine the hard cases to determine what is science and what is pseudoscience Emphasizing that there is no clear line of demarcation between science and nonscience Friedlander leads the reader through case after entertaining case covering the favorites of tabloid science such as astrology and UFOs scientific controversies such as cold fusion and those maverick ideas that were at first rejected by science only to be embraced later There are many good stories here but there is also much learning and wisdom Students of science and interested lay readers will come away from this book with an increased understanding of what science is how it works and how the nonscientist should deal with science at its fringes **Bulletin of the Atomic Scientists**, 1979-12
