Methodological challenges in research on student learning Vincent Donche, Sven De Maeyer, David Gijbels, Huub van den Bergh, 2015-06-15

Research on student learning has undergone many changes in the last decade. In particular, the research methodology has advanced in many different ways: on the level of complexity of data collection and rigor of data analyses. In the quantitative research perspective, many off-line and online measures and statistical analysis techniques have been further meticulously developed. In the qualitative research perspective, a broader range of data collection tools are applied. Also, the use of mixed-method data analysis is increasing. Although in some research strands on student learning the mono-method approach of quantitative research is still the golden rule, in other research strands we notice more methodological creativity in mixing research paradigms and designs, which can be very fruitful advancements for further knowledge development. In this book, we focus on the domain of research on learning patterns in which these methodological shifts are in rapid evolution. A variety of international research cases illustrating current practices of empirical research is presented, showing how different methods of research on student learning can be applied and be useful for future research. Benefits and boundaries of the research methods are critically discussed, and future perspectives are proposed.
