One to Nine: The Inner Life of Numbers Andrew Hodges, 2008-05-17 What Lynne Truss did for grammar in *Eats Shoots Leaves*, Andrew Hodges now does for mathematics. Andrew Hodges, one of Britain's leading biographers and mathematical writers, brings numbers to three-dimensional life in this delightful and illuminating volume filled with illustrations which makes even the most challenging math problems accessible to the layperson. Inspired by millennia of human attempts to figure things out, this pithy book which tackles mathematical conundrums from the ancient Greeks to superstring theory finds a new twist to everything from musical harmony to code breaking, from the chemistry of sunflowers to the mystery of magic squares. Starting with the puzzle of defining unity and ending with the recurring nines of infinite decimals, Hodges tells a story that takes in quantum physics, cosmology, climate change, and the origin of the computer. Hodges has written a classic work at once playful but satisfyingly instructional which will be ideal for the math aficionado and the Sudoku addict as well as for the life of the party.

United States Import Duties Annotated, 1962 *Discourses on Algebra* Igor R. Shafarevich, 2012-12-06 I wish that algebra would be the Cinderella of our story. In the mathematics

program in schools geometry has often been the favorite daughter. The amount of geometric knowledge studied in schools is approximately equal to the level achieved in ancient Greece and summarized by Euclid in his *Elements* third century B.C. For a long time geometry was taught according to Euclid. Simplified variants have recently appeared. In spite of all the changes introduced in geometry courses geometry retains the influence of Euclid and the inclination of the grandiose scientific revolution that occurred in Greece. More than once I have met a person who said I didn't choose math as my profession but I'll never forget the beauty of the elegant edifice built in geometry with its strict deduction of more and more complicated propositions all beginning from the very simplest most obvious statements. Unfortunately I have never heard a similar assessment concerning algebra. Algebra courses in schools comprise a strange mixture of useful rules, logical judgments and exercises in using aids such as tables of logarithms and pocket calculators. Such a course is closer in spirit to the brand of mathematics developed in ancient Egypt and Babylon than to the line of development that appeared in ancient Greece and then continued from the Renaissance in western Europe. Nevertheless algebra is just as fundamental, just as deep and just as beautiful as geometry.
