past two centuries Having looked at energy on a small scale and then on the scale of the Universe itself he shows the link with chaos theory according to which the unexpected is inevitable

A Concrete Introduction to Higher Algebra Lindsay Childs, 2012-12-06 This book is written as an introduction to higher algebra for students with a background of a year of calculus The book developed out of a set of notes for a sophomore junior level course at the State University of New York at Albany entitled Classical Algebra In the 1950s and before it was customary for the first course in algebra to be a course in the theory of equations consisting of a study of polynomials over the complex real and rational numbers and to a lesser extent linear algebra from the point of view of systems of equations Abstract algebra that is the study of groups rings and fields usually followed such a course In recent years the theory of equations course has disappeared Without it students entering abstract algebra courses tend to lack the experience in the algebraic theory of the basic classical examples of the integers and polynomials necessary for understanding and more importantly for appreciating the formalism To meet this problem several texts have recently appeared introducing algebra through number theory

Minimization of the Total Heat Input for Manned Vehicles Entering the Earth's Atmosphere at Hyperbolic Speeds Alvin Seiff, Michael E. Tauber, 1966 The use of conical entry bodies to control the radiative and minimize the total heat input to manned vehicles is investigated with

an imposed acceleration limit on two types of hyperbolic shallow angle entry into the Earth's atmosphere. The local Reynolds number is limited to retain laminar boundary layer. The equations permit any desired values of the acceleration and local Reynolds number limits and of the body radius, body density and heat shield material properties. Numerical examples are given for a range of Reynolds number limits, three body radii and two heat shield materials.
