Numerical Basic:

Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

Hydrodynamic Lubrication of Non-Newtonian Fluids Ping Huang, Qianqian Yang, 2022-09-10 Hydrodynamic

Lubrication of Non Newtonian Fluids covers basic theory lubrication failure and numerical methods and procedures The title offers a feasible method for solving the hydrodynamic lubrication problem for non Newtonian fluids Whereas hydrodynamic lubrication in Newtonian fluids can be solved using the existing Reynolds equation hydrodynamic lubrication in non Newtonian fluid is much more difficult to solve because the non Newtonian constitutive equation is nonlinear Engineers and technicians working on non Newtonian fluid lubrication calculation and analysis will find this to be an invaluable reference on the latest thinking on hydrodynamic lubrication This book presents a unified solution to hydrodynamic lubrication in non Newtonian fluids proposing a flow separation method In addition the title gives methods and insights into viscosity in non Newtonian fluids the lubrication failure mechanism and fluid lubrication mechanism carrying capacity Offers a solution to hydrodynamic lubrication in non Newtonian fluids Covers a new separation method and sets up an integral differential equation towards a unified method Provides insights into the viscosity of non Newtonian fluids putting forward incremental and full viscosity as important concepts Analyzes the lubrication failure mechanism and fluid lubrication mechanism carrying capacity Presents researchers with a way of calculating and analyzing fluid dynamic pressure lubrication flap lubrication and hot bounce lubrication of common non Newtonian fluids

ANS may cause improvements in symbolic math performance and the ANS and symbolic number processing may share a common neural underpinning. However, recently several theories and empirical data cast doubt on the role of the ANS in symbolic math processing. This e-book aims to advance our understanding of the underlying mechanisms of the overlap between the ANS and mathematics.

Reading, Writing, Mathematics and the Developing Brain: Listening to Many Voices Zvia Breznitz, Orly Rubinsten, Victoria J. Molfese, Dennis L. Molfese, 2012-06-01

This valuable addition to the literature offers readers a comprehensive overview of recent brain imaging research focused on reading, writing, and mathematics—a research arena characterized by rapid advances that follow on the heels of fresh developments and techniques in brain imaging itself. With contributions from many of the lead scientists in this field, a number of whom have been responsible for key breakthroughs, the coverage deals with the commonalities as well as the differences between brain activity related to the three core educational topics. At the same time, the volume addresses vital new information on both brain and behavior indicators of developmental problems and points out the new directions being pursued using current advances in brain imaging technologies as well as research-based interventions. The book is also a tribute to a new Edmund J. Safra Brain Center for the Study of Learning Disabilities at the University of Haifa, Israel.

An Introduction to Metalogic Aladdin M. Yaqub, 2014-10-24

An Introduction to Metalogic is a uniquely accessible introduction to the metatheory of first-order predicate logic. No background knowledge of logic is presupposed as the book is entirely self-contained and clearly defines all of the technical terms it employs. Yaqub begins with an introduction to predicate logic and ends with detailed outlines of the proofs of the incompleteness, undecidability, and undefinability theorems covering many related topics in between.
