explores play as a form of somatic engagement that reflects cultural attitudes about development and learning as these have evolved over time in western culture Theorists in the twentieth century such as Klein and Winnicott Huizinga and Callois Piaget Bruner and Vygotsy brought different perspectives to our understanding of play s role in our society In particular Vygotsky s theories about process provide insight into how children attend to learning and assimilate new information The increasing use of digital media as both an entertainment and learning environment at ever younger ages is generating new discussions about the nature and value of play in children s development in particular physical or somatic play The emphasis on games intended for children necessitates a discussion of the cognitive behavioral and neuroscience that supports play activities and physical engagement as a crucial aspect of development The book then looks at the trajectory of digital games in contemporary culture and explores whether these artifacts whether intended for learning or entertainment have extended or are curtailing boundaries of somatic engagement Finally the book discusses alternative play and game design and speculates on the future of new media play artifacts
