Information Resources on the Care and Welfare of Beef Cattle Cynthia Petrie Smith, 2004 One of the main animal welfare concerns in beef cattle production is that of pain and distress

Dehorning castration and branding are husbandry procedures which can cause pain and discomfort Less acute but still distressful are those issues related to the animal environment

Extreme natural conditions can result in cattle that are heat and or cold stressed Drought and the resulting overstocking for available feed resources can also reduce body fatness These are important welfare issues in modern beef production

The following bibliography explores these issues and more and should provide a useful resource for scientists veterinarians extension specialists students and others
