Oeuvres Choisies Tome 4 Correspondances Franfaises:

Einstein's Pathway to the Special Theory of Relativity Galina Weinstein, 2015-06-18 This book pieces together the jigsaw puzzle of Einstein's journey to discovering the special theory of relativity. Between 1902 and 1905 Einstein sat in the Patent Office and may have made calculations on old pieces of paper that were once patent drafts. One can imagine Einstein trying to hide from his boss writing notes on small sheets of paper and according to reports seeing to it that the small sheets of paper on which he was writing would vanish into his desk drawer as soon as he heard footsteps approaching his door. He probably discarded many pieces of papers and calculations and flung them in the waste paper basket in the Patent Office. The end result was that Einstein published nothing regarding the special theory of relativity prior to 1905. For many years before 1905 he had been intensely concerned with the topic in fact he was busily working on the problem for seven or eight years prior to 1905. Unfortunately there are no surviving notebooks and manuscripts, no notes and papers or other primary sources from this critical period to provide any information about the crucial steps that led Einstein to his great discovery. In May 1905 Henri Poincaré sent three letters to Hendrik Lorentz at the same time that Einstein wrote his famous May 1905 letter to Conrad Habicht promising him four works of which the fourth one, Relativity, was a rough draft at that point. In the May 1905 letters to Lorentz Poincaré presented the basic equations of his 1905 Dynamics of the Electron meaning that at this point Poincaré and Einstein both had drafts of papers relating to the principle of relativity. The book discusses Einstein's and Poincaré's creativity and the process by which their ideas developed. The book also explores the misunderstandings and paradoxes apparent in the theory of relativity and unravels the subtleties and creativity of Einstein. **Jacques Hadamard** Vladimir Gilelevič Maz'â, T. O. Shaposhnikova, 1999 This book presents a fascinating story of the long life and great accomplishments of Jacques Hadamard 1865-1963 who was once called the living legend of mathematics. As one of the last universal mathematicians Hadamard's contributions to mathematics are landmarks in various fields. His life is linked with world history of the 20th century in a dramatic way. This work provides an inspiring view of the development of various branches of mathematics during the 19th and 20th centuries. Part I of the book portrays Hadamard's family, childhood and student years, scientific triumphs and his personal life and trials during the first two world wars. The story is told of his involvement in the Dreyfus affair and his subsequent fight for justice and human rights. Also recounted are Hadamard's worldwide travels, his famous seminar, his passion for botany, his home orchestra where he played the violin with Einstein and his interest in the psychology of mathematical creativity. Hadamard's life is described in a readable and inviting way. The authors humorously weave throughout the text his jokes and the myths about him. They also movingly recount the tragic side of his life. Stories about his relatives and friends and old letters and documents create an authentic and colorful picture. The book contains over 300 photographs and illustrations. Part II of the book includes a lucid overview of Hadamard's enormous work spanning over six decades. The authors do an excellent job of connecting his results to current concerns. While the book is accessible to

beginners it also provides rich information of interest to experts Vladimir Mazya and Tatyana Shaposhnikova were the 2003 laureates of the Institut de France's Prix Alfred Verdaguer. One or more prizes are awarded each year based on suggestions from the Académie française, the Académie de sciences and the Académie de beaux arts for the most remarkable work in the arts, literature and the sciences. In 2003 the award for excellence was granted in recognition of Mazya and Shaposhnikova's book Jacques Hadamard *A Universal Mathematician* which is both an historical book about a great citizen and a scientific book about a great mathematician.

Voici la troisième édition de la thèse de Jacques Roger qui dès sa parution en 1963 fut saluée comme un très important ouvrage dont l'ambition était de refaire l'histoire des découvertes scientifiques sur la génération des animaux mais aux confins des domaines respectifs de l'histoire de la philosophie et de l'histoire des sciences de créer un chapitre de l'histoire des idées capable de conduire une meilleure connaissance de l'homme. La Revue d'histoire des sciences XVII no2 avril juin 1964 Yves Laissus p 190 Jacques Roger est un historien des sciences né en 1920 et mort le 26 mars 1990. Agrégé de lettres classiques en 1943 Jacques Roger présente un parcours original chappant la bipartition de l'histoire des sciences entre scientifiques et philosophes. N'étant pas un historien de formation il n'en a pas moins contribué à introduire la méthode historique dans le domaine de l'histoire des sciences. Doyen de l'université de Tours il devient professeur d'histoire des sciences à l'université Paris I 1970 directeur de l'école des Hautes études en Sciences Sociales directeur du Centre international de synthèse et rédacteur en chef de la Revue de synthèse. Ses travaux essentiellement consacrés au développement des sciences naturelles l'époque moderne et Buffon 1707-1788 font encore autorité.

L'épistémologie d'Emile Meyerson Frédéric Fruteau de Laclos, 2009

La philosophie des sciences d'Emile Meyerson 1859-1933 suscite aujourd'hui un regain d'intérêt. Proche de Bergson, de Brunschvicg et de De Broglie, Meyerson apparaît comme un membre éminent quoique négligé de la tradition épistémologique française. Antipositiviste fin connaisseur de la science classique et de la thermodynamique, il propose de pénétrantes interprétations de la relativité et des quantités. Nourri de métaphysique allemande, il est également curieux des avancées théoriques de son temps comme en témoignent ses riches correspondances avec Einstein, Husserl, Cassirer ou encore Dewey et MacTaggart. L'œuvre foisonnante et complexe de Meyerson, critiquée par Bachelard, n'a cessé d'être lue et appréciée de penseurs tels que Popper, Kuhn et Quine. Cette étude s

appuyant sur les grands ouvrages publiés du vivant de l'auteur mais aussi sur des archives inédites montre que l'épistémologie meyerssonienne représente une très originale et très actuelle anthropologie de la connaissance **Catalogue méthodique et raisonné** Bibliothèque Cardinal, 1888 *Correspondance littéraire, philosophique et critique par Grimm, Diderot, Raynal, Meister, etc*, 1882 Catalogue général de la librairie française: 1913-1915.
