Of Moths And Men:

Of Moths and Men Judith Hooper, 2002 In this revelatory work Judith Hooper uncovers the intellectual rivalries petty jealousies and flawed science behind one of the most famous experiments in evolutionary biology Bernard Kettlewell's 1953 experiment on the peppered moths of England made him a media star on the order of Jonas Salk but also an unlikely tragic hero As Hooper recounts in this rollicking scientific detective story the truth can be subverted when the stakes are very high Book jacket *Of Moths and Men* Judith Hooper, 2002 The tale of a flagrant scientific fraud its cover up and the scientific incompetence behind the most important paradigm in evolutionary biology Charles Darwin's theory of evolution The fraud began in 1953 with H B D Kettlewell an amateur but charismatic lepidopterist attached to Oxford University Using studies of the peppered moth *Biston betularia* he showed the process of natural selection at work over a period of months rather than millennia The naturally light coloured moth was found in Kettlewell's experiments to have mutated to a darker variety *Biston carbonaria* in industrial areas where the darker colour would prove a more effective camouflage against predator birds The conclusive evidence was drawn from the rate at which light and dark moths appeared on the trunks of an industrially influenced forest and the rate at which the lighter poorly camouflaged moths were consumed by birds There were only two problems no one was sure that birds naturally ate the pepper moth and the reason they were consumed in such apparently conclusive numbers was that they had been glued to the trees by Kettlewell **Of Moths and Men** Judith Hooper, 2002

Darwin Comes to Town Menno Schilthuizen,2018-04-03 Carrion crows in the Japanese city of Sendai have learned to use passing traffic to crack nuts Lizards in Puerto Rico are evolving feet that better grip surfaces like concrete Europe s urban blackbirds sing at a higher pitch than their rural cousins to be heard over the din of traffic How is this happening Menno Schilthuizen is one of a growing number of urban ecologists studying how our manmade environments are accelerating and changing the evolution of the animals and plants around us In *Darwin Comes to Town* he takes us around the world for an up close look at just how stunningly flexible and swift moving natural selection can be With human populations growing we re having an increasing impact on global ecosystems and nowhere do these impacts overlap as much as they do in cities The urban environment is about as extreme as it gets and the wild animals and plants that live side by side with us need to adapt to a whole suite of challenging conditions they must

manage in the city's hotter climate the urban heat island they need to be able to live either in the semidesert of the tall rocky and cavernous structures we call buildings or in the pocket like oases of city parks which pose their own dangers including smog and free ranging dogs and cats traffic causes continuous noise a mist of fine dust particles and barriers to movement for any animal that cannot fly or burrow food sources are mainly human derived And yet as Schilthuizen shows the wildlife sharing these spaces with us is not just surviving but evolving ways of thriving Darwin Comes to Town draws on eye popping examples of adaptation to share a stunning vision of urban evolution in which humans and wildlife co exist in a unique harmony It reveals that evolution can happen far more rapidly than Darwin dreamed while providing a glimmer of hope that our race toward over population might not take the rest of nature down with us **The Power of Darkness: 560+**
