Banking Structures in Major Countries George G. Kaufman,2012-12-06 The ongoing globalization of financial markets has increased the importance to users of financial services policy makers and financial analysts of understanding the structure and operation of banking systems in other countries as well as that in their own country This volume contributes to such an understanding The structure and operation of the banking system are described for 10 important countries plus the European Economic Community under one cover The contributing authors are knowledgeable and widely respected experts The author or at least one of the coauthors of each chapter is a resident of the country described Each chapter follows a broadly similar outline although the attention devoted to any particular area varies substantially according to authors perceptions of its relative importance in the particular country The chapters spotlight the similarities and differences among

the structures The volume should serve as both a handy and authoritative reference guide for practitioners regulators and students of international banking An early benefit of the book was an international conference held in Chicago in the fall of 1989 on the world integration of financial markets A number of the authors of the chapters presented brief versions of their papers The conference was sponsored jointly by the Federal Reserve Bank of Chicago and the MidAmerica Institute The audience was primarily senior officers and regulators of financial institutions in the midwest The conference generated considerable interest in both the subject matter and the contents of this book

Financial Integration in Europe Harald A. Benink, 2012-12-06 One of the key issues relating to the performance of national economies is the efficiency of the financial system which stands at the heart of the capital allocation process There are two aspects which define efficiency Static efficiency involves the difference between rates of return provided to ultimate savers and the cost of funds to users This gap or spread reflects the direct costs of production operating and administrative costs cost of capital etc It also reflects losses incurred in the financial process as well as any monopoly profits earned and liquidity premiums Financial processes that are considered statically inefficient are usually characterised by high spreads due to high overhead costs high losses barriers to entry and the like Dynamic efficiency is characterised by high rates of financial product and process innovation through time Successful product and process innovation broadens the menu of financial products available to ultimate savers or other agents along the various financial process channels described above Probably the most powerful catalyst affecting the competitive dynamics of the financial services industry has been technological change
