Tsichritzis, 2012-12-06 The term Office Automation implies much and means little The word Office is usually reserved for units in an organization that have a rather general function They are supposed to support different activities but it is notoriously difficult to determine what an office is supposed to do Automation in this loose context may mean many different things At one extreme it is nothing more than giving people better tools than typewriters and telephones with which to do their work more efficiently and effectively At the opposite extreme it implies the replacement of people by machines which perform office procedures automatically In this book we will take the approach that Office Automation is much more than just better tools but falls significantly short of replacing every person in an office It may reduce the need for clerks it may take over some secretarial functions and it may lessen the dependence of principals on support personnel Office Automation will change the office environment It will eliminate the more mundane and well understood functions and will highlight the decision oriented activities in an office The goal of this book is to provide some understanding of office activities and to

and the economics of commerce and industry The late 70s saw many doom laden predictions of those effects but by 1983 both management and trade unions were taking a more objective view of the social and economic impacts and many correspondents now see the new technology as a means of opening up new industries and overcoming the effects of world recessions The chip has involved the factory floor the office the supermarket and the home Electronic funds transfer electronic shopping microelectronic domestic appliances word processors and microprocessor controlled machinery mean that the new technology has pervaded all aspects of social and economic life and the developed countries are now coming to accept it as part of society as a whole Inevitably the flood of literature on the social and economic impacts of new technology has been overwhelming Unfortunately the quality of information and arguments propagated at conferences in journal papers and research reports has indicated that there has been little quantifiable evidence available on the effects of these impacts
