to explain and illustrate fully the use of air photographs in the study of geography It sets out in simple form the limited
amount of technical information which is necessary in order to enjoy fully the fascinating experience of training oneself to
appreciate almost every aspect of the landscape shown on vertical air photographs Thereafter the book consists of nearly 100
high quality air photographs selected from almost every part of Britain each of which is accompanied by a text describing in
detail the features of general as well as of geographical interest which can be detected on the photographic prints The
photographs have been grouped into sections detailing with many aspects of physical and human geography such as the
influence of geology on landforms river erosion and river development glacial action coast forms the relationships between
relief and settlement the appearance of varying agricultural and industrial regions and the shape and character of towns and
villages etc Apart from the explanation of this new geographical technique the selection of photographs is such that this book
