Eisenberg, 1992-01-01 Through lucid theoretical analysis and his own extensive experience in these areas he demonstrates

that the outcomes of rationally conceived programs are usually at odds with the intended result Eisenberg traces this failure to an intrinsic logical incompatibility between what reason tries to do and what it can do Rational method is premised on the possibility of conceiving and correlating all operative factors in a given process However all such factors cannot be taken into account Using a social variation of the principle of indeterminacy the author notes that reason cannot take itself into account any more than the eye can see itself seeing or the hand can grasp itself grasping Similarly reason cannot control how institutional structure affects social behavior nor how legal language determines social reality Eisenberg locates an intrinsic indeterminacy in society that precludes total or even substantial understanding and control of our destinies *Management Learning* John Burgoyne, Michael Reynolds, 1997-10-28 Management Learning introduces the context and history of management learning and offers a critical framework within which the key debates can be understood The book also provides an incisive discussion of the values and purpose inherent in the practice and theory of management learning and charts the diverse external factors influencing and directing the processes of learning The volume concludes with a look forward towards the future reconstruction of the field **Philosophical Foundations for Moral Education and Character**
