## Science With Computers:

**Science with Computers** John Steffee, 1999      *Digitized* Peter J. Bentley, 2012-03-22 There is a hidden science that affects every part of your life. You are fluent in its terminology of email, WiFi, social networking and encryption. You use its results when you make a telephone call, access the Internet, use any factory-produced product or travel in any modern car. The discipline is so new that some prefer to call it a branch of engineering or mathematics. But it is so powerful and world-changing that you would be hard-pressed to find a single human being on the planet unaffected by its achievements. The science of computers enables the supply and creation of power, food, water, medicine, transport, money, communication, entertainment and most goods in shops. It has transformed societies with the Internet, the digitization of information, mobile phone networks and GPS technologies. Here Peter J. Bentley explores how this young discipline grew from its theoretical conception by pioneers such as Turing through its growth spurts in the Internet, its difficult adolescent stage where the promises of AI were never achieved and dot-com bubble burst to its current stage as a semi-mature field now capable of remarkable achievements. Charting the successes and failures of computer science through the years, Bentley discusses what innovations may change our world in the future.

Parnas; Who Invented the First Electronic Digital Computer by Nancy Stern; Foretelling the Future by Adaptive Modeling by Ian H. Witten; and John G. Cleary: The Fifth Generation Banzai or Pie in the Sky. This volume contains more than 30 contributions by outstanding and authoritative authors, grouped into the magazine's regular categories: Editorials, Articles, Departments, Reports from Correspondents, and Features. A Computer Science Reader will be interesting and important to any computing professional or student who wants to know about the status, trends, and controversies in computer science today.
