Communicating Science and Technology in Post-Covid-19 Era Felix Babatunde Ale, 2021-02-01 Research Paper postgraduate from the year 2020 in the subject Communications Technical Communication language English abstract The objective of this paper is to investigate the need for effective communication of science and technology in the post Covid 19 era The disruption as a result of the pandemic has affected social economic political and technological systems across the globe Communicating science and technology provides people with the clear accurate and factual information that are required to respond effectively to the current disruption of systems and with the emergence of the Second Wave of the Coronavirus pandemic The World Health Organization six principles appears to be the most suitable strategy to communicate science and technology in this era The

Framework has six principles states that a communication should be accessible actionable credible and trusted relevant timely and understandable The systems approach is the preferred methodology where a complex science and technology information is broken into small constituent parts and communicated more clearly The strategy will make it simpler for journalists science communicators or writers to be more effective in carrying out their mandates as public educators and informants

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science

communication ethics **Communication and Popularization of Science and Technology in China** Fujun Ren, Jiequan Zhai, 2013-11-12 This book aims to be a reference for researchers studying the promotion of scientific literacy in China as well as a guide for those interested in promoting scientific awareness. It covers advances in science and technology communication and popularization practice and research STCP both in China and abroad. Theoretical issues are discussed and important problems in promoting scientific and technological awareness are identified e.g. basic principles, structures, channels of communication and current needs. This book provides a summary of the advances in STCP in China in recent years especially after the issuing of the National Scientific Literacy Outline including STCP resource and capacity building, science popularization policies, practitioner development, infrastructure construction and the development of the science popularization industry as a whole. At the same time, this book also reviews the design, organization, monitoring and evaluation of science and technology communication and popularization programs. It also highlights current STCP trends and developments in China and calls for a greater emphasis to be placed on research into promoting scientific literacy. It is hoped that this book will be useful to readers both in China and abroad by familiarizing them with the history and theory of STCP as well as its development over time. The 1st chapter briefly reviews the history of STCP. The 2nd through 5th chapters discuss the conceptual framework, basic structure, methods of communication and current STCP needs. The 6th chapter introduces the principle content of programs aimed at improving Chinese citizens' scientific literacy while the 7th and 8th chapters analyze the resources, capacities and conditions that have been developed for STCP in China. The 9th chapter investigates the organization, monitoring and evaluation of science popularization practices and the final chapter summarizes important STCP topics and trends in contemporary China. *Exploring Science Communication* Ulrike Felt, Sarah R. Davies, 2020-01-27 Exploring Science Communication demonstrates how science and technology studies approaches can be explicitly integrated into effective, powerful science communication research. Through a range of case studies from climate change and public parks to Facebook museums and media coverage, it helps you to understand and analyse the complex and diverse ways science and society relate in today's knowledge-intensive environments. Notable features include: A focus on showing how to bring academic STS theory into your own science communication research. Coverage of a range of topics and case studies illustrating different analyses and approaches. Speaks to disciplines across Media, Communication, Science, Technology, Studies, Health, Sciences, Environmental Sciences and related areas. With this book, you will learn how science communication can be more than just about disseminating facts to the public but actually generative, leading to new understanding, research and practices. Handbook of Public Communication of Science and Technology Massimiano Bucchi, Brian Trench, 2008-06-03 Comprehensive yet accessible, this key Handbook provides an up-to-date overview of the fast-growing and increasingly important area of public communication of science and technology from both research and practical perspectives. As well as introducing the main issues, arenas and professional perspectives involved, it presents the findings of

earlier research and the conclusions previously drawn Unlike most existing books on this topic this unique volume couples an overview of the practical problems faced by practitioners with a thorough review of relevant literature and research The practical Handbook format ensures it is a student friendly resource but its breadth of scope and impressive contributors means that it is also ideal for practitioners and professionals working in the field Combining the contributions of different disciplines media and journalism studies sociology and history of science the perspectives of different geographical and cultural contexts and by selecting key contributions from appropriate and well respected authors this original text provides an interdisciplinary as well as a global approach to public communication of science and technology *Scientific and Technological Communication in the Government* United States.
