Scientific Nihilism On The Loss And Recovery Of Physical Explanation:

Scientific Nihilism Daniel Atherne, 1994-03-08 Scientific nihilism is the widespread and ascendant view that the prospects for genuine understanding in scientific knowledge are distinctly negative This view is especially characteristic of philosophy of science and is reflected in a number of professional and popular doctrines In the background is the growing perception that physical science is presently encountering the inherent limits of scientific understanding This book shows that the breakoff of narrative causal explanation in physics although remarkable is no basis for the negative view of scientific knowledge It demonstrates that radiation and field phenomena which include a wide array of enigmatic facts are amenable to explanation even in their most puzzling details Atherne responds fully to the assumption that narrative causal explanation in physics has suffered a permanent demise Rejecting the dogma of a clean bifurcation of philosophy and natural science he proposes a constructive rehabilitation of natural philosophy Styles of Mathematization: The Case of 18th Century

Electrostatics Lucas Marcelo Cavalari Nardi, 2025-08-16 This book studies the mathematization of physics with a special emphasis on 18th century electrostatics as a case study The mathematization of a scientific field is a fruitful yet underdeveloped topic that can be seen through different lenses A noticeable one is the Inferential Conception proposed by Mark Colyvan and Otávio Bueno In this regard the use of mathematics is understood as a set of mappings relating the physical realm and the mathematical realm However the historical process related to the use of mathematics remains unsolved philosophical frameworks usually have a hard time dealing with historical dimensionality Therefore this book provides a study of the historical process of mathematization going beyond the framework in order to explain the use of mathematics a historically using the aforementioned investigation of 18th century electrostatics The research developed gravitates around two centers the history of physics and the philosophy of science making the book of equal importance to both historians and philosophers of science **Fruits of Time** Daniel Atherne, 2003-09 This book argues that physics is

destined to enter a new era marked by an enlarged conception of physical knowledge This is not a matter of future discoveries but has to do with how scientific thought responds over time to what is known today In the new era a genuinely explanatory dimension is restored to physical science which in the current era of thought is quietly abandoned as archaic The current view is that for a certain class of phenomena physical explanations in the sense of descriptions of underlying causal processes are no longer possible It is assumed that the general demise of classical materialistic causal models such as the theory of ether as an all pervading material medium of light propagation consigns this kind of theorizing to history This book fully accepts the breakdown of classical causal models but not the inference that causal explanation itself is outmoded Instead it claims that the demise of classical assumptions opens the door on a prospect of thorough causal physical intelligibility such as was never foreseeable within the classical worldview Written with the inquisitive and critically minded layperson in mind the book describes findings across the major facets of contemporary physics as all pointing to the same

conclusion about the nature of physical reality Explanation in the Special Sciences Marie I. Kaiser, Oliver R. Scholz, Daniel Plenge, Andreas Hüttemann, 2013-11-29 Biology and history are often viewed as closely related disciplines with biology informed by history especially in its task of charting our evolutionary past Maximizing the opportunities for cross fertilization in these two fields requires an accurate reckoning of their commonalities and differences precisely what this volume sets out to achieve Specially commissioned essays by a team of recognized international researchers cover the full panoply of topics in these fields and include notable contributions on the correlativity of evolutionary and historical explanations applying to history the latest causal mechanical approach in the philosophy of biology and the question of generalized laws that might pertain across the two subjects The collection opens with a vital interrogation of general issues on explanation that apart from potentially fruitful areas of interaction could the etiology of the causal mechanical perspective in biology account for the historical trajectory of the Roman Empire this volume also seeks to chart relative certainties distinguishing explanations in biology and history It also assesses techniques such as the use of probabilities in biological reconstruction deployed to overcome the inevitable gaps in physical evidence on early evolution Methodologies such as causal graphs and semantic explanation receive in depth analysis Contributions from a host of prominent and widely read philosophers ensure that this new volume has the stature of a major addition to the literature Emergence and Convergence Mario Bunge, 2015-01-15 Two problems continually arise in the sciences and humanities according to Mario Bunge parts and wholes and the origin of novelty In *Emergence and Convergence* he works to address these problems as well as that of systems and their emergent properties as exemplified by the synthesis of molecules the creation of ideas and social inventions Along the way Bunge examines further topical problems such as the search for the mechanisms underlying observable facts the limitations of both individualism and holism the reach of reduction the abuses of Darwinism the rational choice hermeneutics feud the modularity of the brain vs the unity of the mind the cluster of concepts around maybe the uselessness of many worlds metaphysics and semantics the hazards posed by Bayesianism the nature of partial truth the obstacles to correct medical diagnosis and the formal conditions for the emergence of a cross discipline Bunge is not interested in idle fantasies but about many of the problems that occur in any discipline that studies reality or ways to control it His work is about the merger of initially independent lines of inquiry such as developmental evolutionary biology cognitive neuroscience and socio economics Bunge proposes a clear definition of the concept of emergence to replace that of supervenience and clarifies the notions of system real possibility inverse problem interdiscipline and partial truth that occur in all fields *The Sociology-philosophy Connection* Mario Bunge, 2017-07-12 Most social scientists and philosophers claim that sociology and philosophy are disjoint fields of inquiry Some have wondered how to trace the precise boundary between them Mario Bunge argues that the two fields are so entangled with one another that no demarcation is possible or indeed desirable In fact sociological research has demonstrably philosophical pre suppositions In turn some findings of sociology are bound to correct or enrich the

philosophical theories that deal with the world our knowledge of it or the ways of acting upon it While Bunge's thesis would hardly have shocked Mill Marx Durkheim or Weber it is alien to the current sociological mainstream and dominant philosophical schools Bunge demonstrates that philosophical problematics arise in social science research A fertile philosophy of social science unearths critical presuppositions analyzes key concepts refines effective research strategies crafts coherent and realistic syntheses and identifies important new problems Bunge examines Marx's and Durkheim's thesis that social facts are as objective as physical facts the so called Thomas theorem that refutes the behaviorist thesis that social agents react to social stimuli rather than to the way we perceive them and Merton's thesis on the ethos of basic science which shows that science and morality are intertwined He considers selected philosophical problems raised by contemporary social studies and argues forcefully against tolerance of shabby work in academic social science and philosophy alike

A Marriage of Philosophy and Music Erich Welling, 2014-04 How to use philosophy and music to open your horizons and enjoy being yourself put theory to work and help you experience personal growth is discussed in *A Marriage of Philosophy and Music* It is all about after After having a liberal education you are comfortable in modern culture and after further education and becoming a specialist in some field you enjoy using your skills We learn the ideas and methods of many social cultures and our own chosen specialty but we often neglect the liberal art of disciplining and enjoying the ideas and methods of our own individuality This book offers a path toward the education of privacy with the key words being selection design and beauty The book relates five areas of general human interest spirituality philosophy science art and body awareness The interrelation is accomplished by using personal patterns of experience that are available from philosophy and music Because of the plurality of subject matters and methods used in philosophy and music their patterns of discipline are comparable to self discipline *A Marriage of Philosophy and Music* attempts to create a path in this direction because besides the enjoyment of social culture and personal skills there is enjoyment in being yourself which is a neglected liberal art

Physics and Whitehead Timothy E. Eastman, Hank Keeton, 2012-02-01 Featuring discussions and dialogue by prominent scientists and philosophers this book explores the rich interface of contemporary physics and Whitehead inspired process thought The contributors share the conviction that quantum physics not only corroborates many of Whitehead's philosophical theses but is also illuminated by them Thus though differing in perspective or emphasis the contributions by Geoffrey Chew David Finkelstein Henry Stapp and other scientists conceptually dovetail with those of Philip Clayton Jorge Nobe Yutaka Tanaka and other process philosophers

Planning in Crisis? Walter Schoenwandt, 2016-04-22 In recent years a formidable gulf has opened up between planning theory and practice Over the past four decades planning academics have developed strong theories and created models to accompany and elucidate the planning process However many planning practitioners have resisted the notion that theory can play a positive role in the solution of concrete planning problems This volume provides a comprehensive overview of all the main planning theories and models while also introducing an innovative new model and a

set of tools Modeled on the theories of Mario Bunge this dynamic new approach allows planners to achieve a better understanding of the complexities involved in the role of planners and their impact on the built environment **Technology and Cultural Values** Peter D. Hershock, Marietta Stepaniants, Roger T. Ames, 2003-10-31 Recent history makes clear that the quantum leaps being made in technology are the leading edge of a groundswell of paradigm shifts taking place in science politics economics social institutions and the expression of cultural values Indeed it is the simultaneity and interdependence of these changes occurring in every dimension of human experience and endeavor that makes the present so historically distinctive The essays gathered here give voice to perspectives on the always improvised relationship between technology and cultural values from Africa the Americas Asia Australia Europe and the Pacific Contributors Syed Muhammad Naquib Al Attas Roger T Ames Yoko Arisaka Carl Becker Francesca Bray James Buchanan Arindam Chakrabarti Frank W Derrington Rolf Elberfeld Charles Ess Andrew Feenberg Susantha Goonatilake H J Juan Heng Peter Hershock Thomas P Kasulis George Khushf David Farrell Krell Joel J Kupperman William R LaFleur Lois Ann Lorentzen David Loy Joseph Margolis Hans Georg Mller Robert Cummings Neville Peimin Ni Monica Atieno Opole Kuruvilla Pandikattu SJ Helen Petrovsky Ramon Sentmart Kristin Shrader Frechette Vasanthi Srinivasan Marietta Stepaniants Vyacheslav S Stiopin Henk ten Have Paul B Thompson Mary Tiles David B Wong *Untying the Gordian Knot* Timothy E. Eastman, 2020-12-10 In *Untying the Gordian Knot* Process Reality and Context Timothy E Eastman proposes a new creative synthesis the Logoi framework which is radically inclusive and incorporates both actuality and potentiality to show how the fundamental notions of process logic and relations woven with triads of input output context and quantum logical distinctions can resolve a baker s dozen of age old philosophic problems Further Eastman leverages a century of advances in quantum physics and the Relational Realism interpretation pioneered by Michael Epperson and Elias Zafiris and augmented by the independent research of Ruth Kastner and Hans Primas to resolve long standing issues in understanding quantum physics Adding to this Eastman makes use of advances in information and complex systems semiotics and process philosophy to show how multiple levels of context combined with relations including potential relations both local and local global can provide a grounding for causation emergence and physical law Finally the Logoi framework goes beyond standard ways of knowing that of context independence science and context focus arts humanities to demonstrate the inevitable role of ultimate context meaning spiritual dimension as part of a transformative ecological vision which is urgently needed in these times of human and environmental crises

Indeterminacy Jose V. Ciprut, 2008 Interdisciplinary perspectives on the concepts of indeterminacy and indeterminability and the distinctions between the two Formal thinking about certainty uncertainty gained greater focus in scientific domains with the advent of particle physics and quantum mechanics Concern with the exact predictability of events under guidance from scientific determinism led to speculation then acknowledgement of quantum indeterminacy But distinctions were made between what is physically indeterminate out there and what is indeterminable by human observation

or in human action over here on the inside right now The implications of these insights into indeterminacy and indeterminabilities for practical and theoretical knowledge span physics philosophy ontology causality and the philosophy of mind In this book contributors from a range of disciplines consider the concept of indeterminacy and a few varieties of indeterminability with attention to the distinctions between the two phenomena appropriate approaches for examining both and the differences vis vis uncertainty vagueness and ambiguity Historical Abstracts ,1995 Vols 17 18 cover 1775 1914
