An Introduction to Science Studies John M. Ziman, 1987-07-23 The purpose of this book is to give a coherent account of the different perspectives on science and technology that are normally studied under various disciplinary heads such as philosophy of science sociology of science and science policy It is intended for students embarking on courses in these subjects and assumes no special knowledge of any science It is written in a direct and simple style and technical language is introduced very sparingly As various perspectives are sketched out in this book the reader moves towards a consistent conception of contemporary science as a rapidly changing social institution that has already grown out of its traditional forms and plays a central role in society at large It will appeal to students in a wide range of scientific disciplines and complement well Professor Ziman's earlier books

Communication in Science A. V. S. de Reuck, Julie Knight, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world

**The Status of Soviet Civil Science** Craig Sinclair, 2012-12-06 This volume represents one outcome of the initiatives taken from time to time by the NATO Science Committee to add to the work of supporting civil science within the Alliance by mounting open meetings or other projects dealing with some topical aspect of science and technology policy Past examples have included the 20th anniversary meeting of the establishment of the Science Committee in 1978 which made a review of the achievements of the various programmes It proved to be a valuable opportunity to take stock of the impact of science and technology on Western societies and was a particularly useful occasion for a critical analysis of the changing nature and social role of science and technology In contrast the Science Committee Conferences in 1973 and 1976 on the Technology of Efficient Energy Utilization and on Thermal Energy Storage were responses of the Committee to specific technological problems engendered by the then acute energy supply position A similar technologically oriented study was made in 1975 of the Rational Use of Potentially Scarce Metals These initiatives were the counterpoint to the bulk of the continuing work of the Committee in funding scientific mobility in the Alliance as support to civil science This latter is done competitively in response to unsolicited applications The Committee hopes to demonstrate by its special activities its flexibility and responsiveness to the evolving activities technologists and policy makers

**Young People's Images of Science** Rosalind Driver, John Leach, Robin Millar, Phil Scott, 1996-01-16 What ideas about science do school students form as a result of their experiences in and out of school How might science teaching in schools develop a more scientifically literate society How do school students understand disputes about scientific issues including those which have social significance such as the irradiation of food There have been calls in the UK and elsewhere for a greater public understanding of science underpinned by amongst other things school science education However the relationship between school science scientific literacy and the public understanding of science remains controversial In this book the authors argue that an understanding of science goes beyond learning the facts laws and theories of science and that it involves understanding the nature of scientific knowledge itself and the relationships between science and society Results of a major study into the understanding of these issues by school students aged 9 to 16 are described These results suggest that the success of the school science curriculum in promoting this kind of understanding is at best limited The book concludes by discussing ways in which the school science curriculum could be adapted to better equip students as future citizens in our modern scientific and technological society It will be particularly relevant to science teachers advisers and inspectors teacher educators and curriculum planners
