Practical Development Environments Matthew B. Doar,2005-09-23 This book doesn't tell you how to write faster code or how to write code with fewer memory leaks or even how to debug code at all What it does tell you is how to build your product in better ways how to keep track of the code that you write and how to track the bugs in your code Plus some more things you'll wish you had known before starting a project

Practical Development Environments is a guide a collection of advice about real development environments for small to medium sized projects and groups Each of the chapters considers a different kind of tool tools for tracking versions of files build tools testing tools bug tracking tools tools for creating documentation and tools for creating packaged releases Each chapter discusses what you should look for in that kind of tool and what to avoid and also describes some good ideas bad ideas and annoying experiences for each area Specific instances of each type of tool are described in enough detail so that you can decide which ones you want to investigate further Developers want to write code not maintain makefiles Writers want to write content instead of manage templates IT provides machines but doesn't have time to maintain all the different tools Managers want the product to move smoothly from development to release and are interested in tools to help this happen more often Whether as a full time position or just because they are helpful all projects have toolsmiths making choices about tools installing them and then maintaining the tools that everyone else depends upon This book is especially for everyone who ends up being a toolsmith for his or her group

Software Maintenance - A Management Perspective Phaneendra Nath Vellanky, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and

networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact
