Pharmacology of Bone Gregory R. Mundy, T. John Martin, 2012-12-06 Why have another book in the bone calcium field When the idea was first raised that this important area of biomedical research should be given more attention in the review literature we felt that comprehensive texts recently published and in press were directed at more general audiences and did not address in detail some of the important areas of current investigation As this field has grown and matured information has accumulated at such a rapid rate that it has become impossible to keep abreast of all areas by reading the original articles in the scientific literature Accordingly we believed there was a void which could be filled by a collection of essays on specific topics in which significant progress had recently been made Thus this book is meant to be an up to date account of specific topics by investigators at the forefront of their areas of research We have tried to review major areas of basic science in the field which have an impact on our understanding of the diseases of bone and mineral We hope that you will agree that the authors have done an outstanding job and will find the volume as stimulating to read as we have San Antonio TX USA GREGORY R MUNDY Melbourne Australia T JOHN MARTIN Spring 1993 Contents CHAPTER 1 Calcium Homeostasis A M PARFITI With 12 Figures 1 A Introduction and Scope 1 B Concepts of Homeostasis 3 C Extracellular Fluid Free Calcium The Controlled Variable **Current Bibliographies in Medicine** ,1988 Clinical Biochemistry E-Book William J.

Victims of Ireland's Great Famine Jonny Geber, 2018-03-15 With one million dead and just as many forced to emigrate the Irish Famine 1845-52 is among the worst health calamities in history Because historical records of the Victorian period in Ireland were generally written by the middle and upper classes relatively little has been known about those who suffered the most the poor and destitute But in 2006 archaeologists excavated an until then completely unknown intramural mass burial containing the remains of nearly 1 000 Kilkenny Union Workhouse inmates In the first bioarchaeological study of Great Famine victims Jonny Geber uses skeletal analysis to tell the story of how and why the Famine decimated the lowest levels of nineteenth century Irish society Seeking help at the workhouse was an act of desperation by people who were severely malnourished and physically exhausted Overcrowded it turned into a hotspot of infectious disease as did many other union workhouses in Ireland during the Famine Geber reveals how medical officers struggled to keep people alive as evidenced by cases of amputations but also craniotomies Still mortality rates increased and the city cemeteries filled up until there was eventually no choice but to resort to intramural burials Deceased inmates were buried in shrouds and coffins an attempt by the Board of Guardians of the workhouse to maintain a degree of dignity towards these victims By examining the physical conditions of the inmates that might have contributed to their institutionalization as well as to the resulting health consequences Geber sheds new and unprecedented light on Ireland's Great Hunger
