Catarci,2013-03-20 Video segmentation is the most fundamental process for appropriate indexing and retrieval of video intervals In general video streams are composed 1 of shots delimited by physical shot boundaries Substantial work has been done on how to detect such shot boundaries automatically Arman et al 1993 Zhang et al 1993 Zhang et al 1995 Kobla et al 1997 Through the integration of technologies such as image processing speech character recognition and natural language understanding keywords can be extracted and associated with these shots for indexing Wactlar et al 1996 A single shot however rarely carries enough amount of information to be meaningful by itself Usually it is a semantically meaningful interval that most users are interested in retrieving Generally such meaningful intervals span several consecutive shots There hardly exists any efficient and reliable technique either automatic or manual to identify all semantically meaningful intervals within a video stream Works by Smith and Davenport 1992 Oomoto and Tanaka 1993 Weiss et al 1995 Hjelsvold et al 1996 suggest manually defining all such intervals in the database in advance However even an hour long video may have an indefinite number of meaningful intervals Moreover video data is multi interpretative Therefore given a query what is a meaningful interval to an annotator may not be meaningful to the user who issues the query In practice manual indexing of meaningful intervals is labour intensive and inadequate *Database and Expert Systems Applications* Abdelkader

The Discipline of Organizing Robert J. Glushko, 2013-05-17 A framework for the theory and practice of organizing that integrates the concepts and methods of information organization and information retrieval. Organizing is such a common activity that we often do it without thinking much about it. In our daily lives we organize physical things (books on shelves, cutlery in kitchen drawers) and digital things (Web pages, MP3 files, scientific datasets). Millions of people create and browse Web sites, blog, tag, tweet, and upload and download content of all media types without thinking "I'm organizing now" or "I'm retrieving now." This book offers a framework for the theory and practice of organizing that integrates information organization (IO) and information retrieval (IR), bridging the disciplinary chasms between Library and Information Science and Computer Science, each of which views and teaches IO and IR as separate topics and in substantially different ways. It introduces the unifying concept of an Organizing System: an intentionally arranged collection of resources and the interactions they support, and then explains the key concepts and challenges in the design and deployment of Organizing Systems in many domains, including libraries, museums, business information systems, personal information management, and social computing. Intended for classroom use or as a professional reference, the book covers the activities common to all organizing systems: identifying resources to be organized; organizing resources by describing and classifying them; designing resource-based interactions; and maintaining resources and organization over time. The book is extensively annotated with disciplinary-specific notes to ground it with relevant concepts and references of library science, computing, cognitive science, law, and business.
