things to consider:

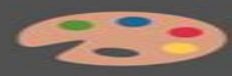

what is the metal?

where to enamel?

what colors?

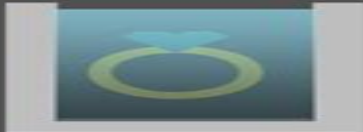

## [ the process ]

### 1. polish the surface

The first step is to ensure that the surface of the item is smooth, otherwise the enamel will come out uneven. If there is any existing enamel, it needs to be removed.

### 2. clean the jewelry

After polishing, the item is placed into an ultrasonic cleaner. The cleaner uses soundwaves to remove all dirt from the piece, as well as polishing residue.

### 3. apply the enameling

The enamel is applied to the areas needing coloration. Depending on the design, this can require a steady hand and meticulous attention to detail.

### 4. cure the enamel

After the enamel is placed onto the surface of the jewelry, the item is sent to a kiln or an oven to bake, which cures the enamel and ensures that it is hard and damage-resistant.

### 5. remove the finished product

Once the baking is finished, the enamel is complete! The item is now ready to wear.

*Enameling Principles and Practice* Kenneth F. Bates, 2011-03-23 Enameling on metal is not difficult It is an exacting art which demands careful attention to such details as cleaning application and firing but it cannot be called hard to do In my opinion a technical process such as enameling becomes as easy or hard to do as the one doing it makes it for himself If one proposes to be an artist he never considers such an ambiguous term but works with only one idea in mind that is to finish to his own satisfaction the present piece of work so that he may be released to start the next There can be no termination to art endeavor for especially after finishing an enamel there are always variations of color texture and motif which come to one s mind The process of making and firing an enamel
