Metal Ions In Biology And Medecine Volume 8 Les Ions Metalliques En Biologie:

Microbial Bioremediation & Biodegradation Maulin P. Shah, 2020-04-30 Microbial or biological degradation has long been the subject of active concern and the rapid expansion and growing sophistication of various industries in the last century has significantly increased the volume and complexity of toxic residues of wastes. These can be remediated by plants and microbes either natural origin or adapted for a specific purpose in a process known as bioremediation. The interest in microbial biodegradation of pollutants has intensified in recent years in an attempt to find sustainable ways to clean contaminated environments. These bioremediation and biotransformation methods take advantage of the tremendous microbial catabolic diversity to degrade, transform or accumulate a variety of compounds such as hydrocarbons, polychlorinated biphenyls, polycyclic aromatic hydrocarbons, pharmaceutical substances, radionuclides and metals. Unlike conventional methods, bioremediation does not physically disturb the site. This book describes the basic principles of biodegradation and shows how these principles are related to bioremediation. Authored by leading international environmental microbiologists, it discusses topics such as aerobic biodegradation, microbial degradation of pollutants and microbial community dynamics. It provides valuable insights into how biodegradation processes work and can be utilised for pollution abatement and as such appeals to researchers and postgraduate students as well as experts in the field of bioremediation.

Nutrition and Dietary Interventions in Cancer Rida Fatima Saeed, Sadr ul Shaheed, 2024-08-12 This book presents the most up to date information on the effects of nutrition and food on cancer prevention and management. The book will provide clinicians and other healthcare practitioners with an educational source on how to educate cancer patients and their families on nutrition and dietary during cancer treatment. Recent nutritional epidemiology studies have occasionally produced controversial or unexpected results and highlight the need for additional research on diet and cancer risk. Chapters within the book focus among others on the role of natural antioxidants in cancer, the importance of micronutrients in cancer prevention and nutritional genomics and their role in cancer prevention. By familiarizing readers with the latest developments in this complex field, the book offers a valuable resource for scientists, clinicians and students alike.
