From Waste to Resource Christoph M. Brombacher, 1999

Resource Recovery in Industrial Waste Waters Ali Khadir, Khum Gurung, Mika Sillanpää, 2023-07-20 Resource Recovery in Industrial Waste Waters provides a holistic approach for discovering and harnessing valuable resources from industrial wastewaters the cutting edge technologies required and a discussion on the new findings In three volumes the books stress the importance of contaminated waters remediation including surface waters municipal or industrial wastewaters and treating these waters as a new source of nutrients minerals and energy It introduces polluted waters as new and sustainable sources rather than seeing wastewaters as only a source of hazardous organic and inorganic matters Sections discuss wastewater treatment and recovery and contribute to generate a sustainable approach of wastewater by providing the main advantages and disadvantages of both wastewater polluted water treatment and recovery Reviews the current status of industrial wastewater treatment methods Discusses the growing need of resource recovery from industrial wastewater along with the challenges Describes the importance of water reuse for combating water scarcity

by describing current techniques and challenges Evaluates the potential of the current market and status towards industrial wastewater resource recovery Considers cutting edge technologies for resource recovery Contains comprehensive discussions on possibility of almost all recoverable resources from industrial wastewater **From Waste To Resource**

Christoph M. Broumbacker,1999 *Biohydrometallurgical Recycling of Metals from Industrial Wastes* Hong

Hocheng,2017-09-11 Although many available metal recycling methods are simple and fast they are also expensive and cause environmental pollution Biohydrometallurgical processing of metals offers an alternative to overcome these issues as the use of biological means not only helps to conserve dwindling ore resources but also fulfills the need for the unambiguous need to extract metals in nonpolluting low energy and low cost way This book covers biohydrometallurgy and its application in the recovery of metals from secondary sources like wastes It aims to provide readers with a comprehensive overview of different wastes for metal recovery and biological treatment methods that are both environmentally friendly and economically viable

Metals in Wastes Karolina Wieszczycska,Bartosz Tylkowski,Katarzyna Staszak,2018-07-23 Metals in Wastes is an excellent guide for scientists students engineers chemists and industrial chemists who are looking for knowledge of the main sources of metals in industrial wastes Metals are valuable materials that can be recycled again and again without degrading their properties The recycling of metals enables us to preserve natural resources while requiring less energy to process than the manufacture of new products using virgin raw materials A team of experts reviews the state of the art and provides the readers not only with a comprehensive in depth overview of the main composition of wastes but also discloses innovative methods which have been applied for recovery of critical and valuable metals in petrochemical industry rubber energy and automotive industries This know how could be considered as a useful reference tool for moving towards the zero waste economy Additionally the book describes the economic aspects of metals recovery from various sources This is essential for those already involved in the metals business and also for the financial investment and advisory community internationally

Biohydrometallurgical Recycling of Metals from Industrial Wastes H. Hocheng,Mital Chakankar,Umesh Uttamrao Jadhav,Swati Gurme,2025 Although many available metal recycling methods are simple and fast they are also expensive and cause environmental pollution Biohydrometallurgical processing of metals offers an alternative to overcome these issues as the use of biological means not only helps to conserve dwindling ore resources but also fulfills the need for the unambiguous need to extract metals in nonpolluting low energy and low cost way This book covers biohydrometallurgy and its application in the recovery of metals from secondary sources like wastes Fully updated for a new edition it provides readers with a comprehensive overview of different wastes for metal recovery and biological treatment methods that are both environmentally friendly and economically viable Offers a detailed explanation about generation of different metals containing industrial waste Explains traditional and new biological methods of recycling Updated to reflect research advances across different industrial waste sources including electric vehicle batteries and LCDs from computers and other

devices Focuses on each waste type and explores in detail the biohydrometallurgical recovery of metals from that waste Discusses fundamental microbial studies in bioleaching and updates about the use of emerging technologies and integrated techniques with different methods in combination for metal recovery Features a new chapter on techniques for metal extraction from bioleachate This book serves as an essential resource for researchers and professional engineers working in chemical and environmental engineering and biotechnology

Extraction of Precious Metals from Industrial Waste Using Microbial Technology Maulin P. Shah, 2025-03-13 This book discusses the methods of biorecovery of various metals and includes current challenges and prospects of biorecovery of metals Millions of tons of electrical and electronic equipment wastes are being generated worldwide out of which a very small fraction is properly collected and recycled while the majority ends up in landfills Loss of critical raw materials in this represents an unnecessarily high cost to the economy and a pressing need to develop cheap and sustainable recycling process Bacteria such as *Cupriavidus* sp can tolerate high concentration of metals such as silver and extracellularly synthesize silver nanoparticles AgNPs Such solubilize metals owing to various metabolic products thus help in biologically recovering these resources Biorecovery of metals is important due to the need for resource conservation In certain electroplating industries especially involving precious metals such as silver gold platinum and palladium the wastewater contains adequate amounts of precious and valuable metals A suitable wastewater treatment is required not only to remove the heavy metals but also to recover those precious and valuable metals for both growing economy and to reduce dependence on import and for environmental concerns
