Metal Vapor And Metal Halide Vapor Lasers:

Metal Vapor and Metal Halide Vapor Lasers G. G. Petrash, 1988 Translated from the Russian original Nauka Pub 1987 The time and place of the proceedings are not specified Various possible implementations of the electrical circuits of the pulsed power supply for active media are examined Presents systematic investigation of the thermal operating conditions of self heating lasers the spectral and temporal High-brightness Metal Vapour Lasers V. M. Batenin, V. V. Buchanov, A. M. Boichenko, M. A. Kazaryan, I. I. Klimovskii, E. I. Molodykh, 2016-12-12 High brightness metal vapor lasers have become the most bright and powerful in the visible spectral range among all existing laser types resulting in numerous applications ranging from purely fundamental research to practical application in large scale commercial problems such as isotope selection This book presents a full series of fundamental problems on the development of physical fundamentals and mathematical models for practical realization of a high power laser radiation on self contained transitions in metal atoms It is the first fundamental review on physics and the technique of high brightness metal vapor lasers **Pulsed Metal Vapour Lasers** C.E. Little, N.V. Sabotinov, 2012-12-06 A comprehensive up to date review of the physics and applications of a major class of laser the most important example of which is the copper vapour laser A collection of 50 papers written by the world's leaders in the field Papers cover the early history of pulsed metal vapour lasers the plasma kinetics and excitation mechanisms of self terminating and recombination metal vapour lasers beam quality issues for applications frequency harmonic generation for mid UV applications high precision processing of metals ceramics glasses and plastics using metal vapour lasers applications in medicine including oncology and dermatology applications in science such as spectroscopy and mass spectrometry A practical source of information on the physics engineering and applications of metal vapour lasers Audience scientists teachers and graduate researchers working in the fields of gas lasers laser optics gas discharges optoelectronics and laser applications in industry science and medicine *Metal Vapour Lasers* Christopher E. Little, 1999-03-12 Metal Vapour Lasers Christopher E Little University of St Andrews St Andrews Scotland Since the first successful demonstration of a metal vapour laser MVL in 1962 this class of laser has become widely used in a broad range of fields including precision materials processing isotope separation and medicine The MVLs that are used today have a range of impressive characteristics that are not readily available using other technologies In particular the combination of high average output powers pulse recurrence frequencies and beam quality available from green yellow Cu vapour lasers CVLs and Cu bromide lasers coupled with the high quality multiwatt ultraviolet 265 289 nm radiation that can be produced using simple nonlinear optical techniques means that Cu lasers will continue to be important for many years Metal Vapour Lasers covers all the most commercially important and scientifically interesting pulsed and continuous wave CW gas discharge MVLs and includes device histories operating characteristics engineering kinetics commercial exploitation and applications Short descriptions of gas discharges and excitation techniques make this volume self consistent A comprehensive

bibliography is also provided The greater part of this book is devoted to CVLs and their variants including new sealed off high power kinetically enhanced CVLs and Cu bromide lasers However many other self terminating MVLs are also discussed including the red AuVL green infrared MnVL and infrared BaVL Pulsed high gain high average power lasers in the UV violet 373 7 430 5 nm spectral regions are represented by Sr and Ca discharge afterglow recombination lasers The most commercially successful of the MVLs the CW UV blue cathodoluminescent He Cd ion laser is described Hollow cathode lasers are represented in two guises white light blue green red He Cd ion lasers and UV infrared Ne He Cu ion lasers This unique volume is an essential reference source for all those working on metal vapour lasers and all those who use them from postgraduate students through to experienced scientists and engineers It will also be extremely useful to all those working in other gas laser technologies and in gas discharge physics
