Technical Resource Document Treatment Technologies for Solvent Containing Wastes ,1987 Treatment Technologies Mritunjay Chaubey, 2021-02-08 WASTEWATER TREATMENT TECHNOLOGIES Globally the practice of wastewater treatment before discharge is inconsistent The United Nations World Water Development Report 2017 estimated that globally over 80% of all wastewater is discharged without treatment. The discharge of untreated or inadequately treated wastewater into the environment results in the pollution of surface water soil and groundwater According to the WHO water related diseases kill around 2 2 million people globally each year mostly children in developing countries We need to understand that wastewater is not merely a water management issue it affects the environment all living beings and can have direct impacts on economies The establishment of UN Sustainable Development Goal 6 Clean Water and Sanitation which aims to ensure availability and sustainable management of water and sanitation for all reflects the increased attention on water and wastewater treatment issues in the global political agenda Water reuse is one of the most efficient cost effective and eco friendly ways to ensure water resilience Embedding sustainability into wastewater treatment is the best opportunity for industries to drive smarter innovation and efficient wastewater treatment. The modern concept of industrial wastewater treatment is moving away from conventional design Wastewater treatment technology is moving towards extreme modular design using smart and sustainable technology This book is intended as a reference book for all wastewater treatment professionals and operational personnel It may also be used as a textbook on graduate and postgraduate courses in the field of wastewater treatment and management The book takes a holistic view of the practical problems faced by industry and provides multiple needs based solutions to tackle wastewater treatment and management issues It elaborates on selection of technology and their design criteria for different types of wastewater This will enable engineering students and professionals to expand their horizons in the fields of wastewater treatment and management

The term usually relates to materials produced by human activity and the process is generally undertaken to reduce their effect on health the environment or aesthetics Waste management is a distinct practice from resource recovery which focuses on delaying the rate of consumption of natural resources The management of wastes treats all materials as a single class whether solid liquid gaseous or radioactive substances and tried to reduce the harmful environmental impacts of each through different methods Rapid industrialization last few decades have led to the depletion of pollution of precious natural resources in India depletes and pollutes resources continuously Further the rapid industrial developments have led to the generation of huge quantities of hazardous wastes which have further aggravated the environmental problems in the country by depleting and polluting natural resources In fact man today is caught in the vicious circle of increasing wants declining resources and increasing waste being generated by the industries and municipalities is posing a problem of enormous dimensions. The domestic and industrial effluents are contributing in enhancing this problem It might become the biggest problem if it is not dealt with immediately Therefore rational and sustainable utilization of natural resources and its protection from toxic releases is vital for sustainable socioeconomic development Hazardous waste management is a new concept for most of the Asian countries including India The utilization of resources and generation of waste is for beyond the limit that the biosphere was made to carry This book majorly deals with industrial waste industrial waste water technology modern technologies for water pollution control water recycle product recovery air pollution control environmental management system EMS surface active agents and contamination of water physical methods for the treatment of organic acid bearing wastes realities of waste cyanide treatment in India biological treatment of aqueous wastes plastics and generated wastes alginate industry waste a source of biogas acid charred waste as a resource material for highly active adsorbent We have made a sincere effort to bring out this book which helps in
