Final Report on Sheet Metal Forming Technology (Handbook)** W. W. Wood,Aeronautical Systems Division (U.S.),1963 The purpose of this project is to determine the inherent limitations of sheet metal forming processes to develop the knowledge to significantly advance these and to recommend the manner in which this can be accomplished In addition this Forming

Handbook has been compiled to give the principle applications and limitations of the major sheet metal forming processes and materials. It is presented in three major sections: Material Purchasing Information, Conventional Forming, and Advanced Methods of Forming. The first discusses availability, costs, chemical composition, heat treatment, and properties for a broad range of sheet metal alloys. Quantitative design limits are given in the Conventional Forming Section. The section on Advanced Methods of Forming presents the fundamentals for forming processes such as explosive capacitor discharge, combustible gas, high pressure rubber, and vibration.

Handbook of Metal Forming Process Darren Wang, 2015-01-21. This book discusses various characteristics of metal forming and its process tools and design. The various chapters within this book discuss advanced processes and analysis of these processes, keeping in mind the aspects of the materials. The book also includes chapters on machine tools and their structures. Strategies for a programmable metal forming press and procedures for calculating forming limits of sheet metal are also discussed.
