Metamorphosis Of The Given Toward An Eco:

The Law's Ultimate Frontier: Towards an Ecological Jurisprudence Horatia Muir Watt, 2023-05-18 This important book offers an ambitious and interdisciplinary vision of how private international law or the conflict of laws might serve as a heuristic for re working our general understandings of legality in directions that respond to ever deepening global ecological crises Unusual in legal scholarship the author borrows in bricolage mode from the work of Bruno Latour alongside indigenous cosmologies extinction theories and Levinassian phenomenology to demonstrate why this field s specific frontier location at the outpost of the law where it is viewed from the outside as obscure and from the inside as a self contained normative world generates its potential power to transform law generally and globally Combining pragmatic and pluralist theory with an excavation of shadow ecological dimensions of law the author a recognised authority within the field as conventionally understood offers a truly global view Put simply it is a generational magnum opus All international and transnational lawyers be they in the private or public field should read this book [The Metamorphosis of the Amazon](#) Maximilian Fritz Feichtner, 2023-12-21 Offers new perspectives on the history of oil extraction in the Ecuadorian Amazon through the experiences of oil workers **Toward an Ecology of Transfiguration** John Chryssavgis, Bruce V. Foltz, 2013-06-03 Can Orthodox Christianity offer spiritual resources uniquely suited to the environmental concerns of today This book makes the case emphatically that it can indeed In addition to being the first substantial and comprehensive collection of essays in any language to address environmental issues from the Orthodox point of view this volume with contributions from many of the most influential theologians and philosophers in contemporary world Orthodoxy will engage a wide audience in academic as well as popular circles resonating not only with Orthodox audiences but with all those in search of a fresh approach to environmental theory and ethics that can bring to bear the resources of ancient spirituality often virtually unknown in the West on modern challenges and dilemmas [Developmental Biology and Larval Ecology](#) Klaus Anger, Steffen Harzsch, Martin Thiel, 2020-05-30 This is the seventh volume of a ten volume series on The Natural History of the Crustacea Chapters in this volume synthesize our current understanding of early crustacean development from the egg through the embryonic and larval phase The first part of this book focuses on the elemental aspects of crustacean embryonic development The second part of the book provides an account of the larval phase of crustaceans and describes processes that influence the development from hatching to an adult like juvenile The third and final part of the book explores ecological interactions during the planktonic phase and how crustacean larvae manage to find food navigate the dynamic water column and avoid predators in a medium that offers few refuges **Encountering the World** Edward S. Reed, 1996-08-29 Encountering the World reorients modern psychology by finding a viable middle ground between the study of nerve cells and cultural analysis The emerging field of ecological psychology focuses on the human niche and our uniquely evolved modes of action and interaction Rejecting both mechanistic cognitive science and reductionistic neuroscience the

author offers a new psychology that combines ecological and experimental methods to help us better understand the ways in which people and animals make their way through the world The book provides a comprehensive treatment of ecological psychology and a unique synthesis of the work of Darwin neural Darwinism and modern ecologists with James Gibson's approach to perception The author presents detailed discussions on communication sociality cognition and language topics often overlooked by ecological psychologists Other issues covered include ecological approaches to animal behavior neural mechanisms perception action and interaction Provocative and controversial Encountering the World makes a significant contribution to the debate over the nature of psychology

Progress in Ecological Stoichiometry Dedmer B. Van de Waal, James J. Elser, Adam C. Martiny, Robert W. Sterner, James B. Cotner, 2018 Ecological stoichiometry concerns the way that the elemental composition of organisms shapes their ecology It deals with the balance or imbalance of elemental ratios and how that affects organism growth nutrient cycling and the interactions with the biotic and abiotic worlds The elemental composition of organisms is a set of constraints through which all the Earth's biogeochemical cycles must pass All organisms consume nutrients and acquire compounds from the environment proportional to their needs Organismal elemental needs are determined in turn by the energy required to live and grow the physical and chemical constraints of their environment and their requirements for relatively large polymeric biomolecules such as RNA DNA lipids and proteins as well as for structural needs including stems bones shells etc These materials together constitute most of the biomass of living organisms Although there may be little variability in elemental ratios of many of these biomolecules changing the proportions of different biomolecules can have important effects on organismal elemental composition Consequently the variation in elemental composition both within and across organisms can be tremendous which has important implications for Earth's biogeochemical cycles It has been over a decade since the publication of Sterner and Elser's book Ecological Stoichiometry 2002 In the intervening years hundreds of papers on stoichiometric topics ranging from evolution and regulation of nutrient content in organisms to the role of stoichiometry in populations communities ecosystems and global biogeochemical dynamics have been published Here we present a collection of contributions from the broad scientific community to highlight recent insights in the field of Ecological Stoichiometry

The Metamorphosis of the European Economic Constitution Herwig C.H. Hofmann, Katerina Pantazatou, Giovanni Zaccaroni, 2019 Demonstrating the ways in which the micro and macro economic constitutions of Europe have reacted to legal measures enacted to counter the economic crisis of the past decade this innovative book takes an interdisciplinary approach in its attempt to understand and portray the metamorphosis of the European Economic Constitution It contains contributions from leading scholars and experts in European economic law discussing the challenges solutions found problems arising and possible approaches to embed the economic constitution in

Ecological Connectivity among Tropical Coastal Ecosystems Ivan Nagelkerken, 2009-09-23 Mangrove forests seagrass beds and coral reefs are circumtropical ecosystems that are highly productive and provide many important biological functions and economic services These ecosystems cover large surface areas in the shallow tropical coastal seascape but have suffered from serious human degradation especially in the last few decades Part of their diversity productivity and functioning seems to be based on their juxtaposition Especially in the last decade significant advances have been made on new insights into their ecological connectivity This authoritative book provides a first time comprehensive review of the major ecological interactions across tropical marine ecosystems that result from the mutual exchange of nutrients organic matter fish and crustaceans A group of leading authors from around the world reviews the patterns and underlying mechanisms of important biogeochemical and biological linkages among tropical coastal ecosystems in 15 chapters Included are chapters that review cutting edge tools to study and quantify these linkages the importance of such linkages for fisheries and how tropical ecosystems should be conserved and managed for sustainable use by future generations The book uses examples from all over the world and provides an up to date review of the latest published literature This book is a must read for professionals working on the conservation management and ecology of mangrove seagrass and coral reef ecosystems

Eco's Chaosmos Cristina Farronato, 2003-01-01 While Umberto Eco's intellectual itinerary was marked by his early studies of post-Crocean aesthetics and his spectacular concentration on linguistics information theory structuralism semiotics cognitive science and media studies what constitutes the peculiarity of his critical and fiction writing is the tension between a typically medieval search for a code and the hermeneutic representative of deconstructive tendencies This tension between cosmos and chaos order and disorder is reflected in the word chaosmos In this brilliant assessment of the philosophical basis of Eco's critical and fictional writing Cristina Farronato explores the other distinctive aspect of Eco's thought the struggle for a composition of opposites the outcome deriving from his ability to elicit similar contrasts from the past and re play them in modern terms Focusing principally on how Eco's scholarly background influenced his study of semiotics Farronato analyzes *The Name of the Rose* in relation to William of Ockham's epistemology C S Peirce's work on abduction and Wittgenstein's theory of language She discusses Foucault's *Pendulum* as an explicit comment on the modern debate on interpretation through a direct reference to Early Modern hermetic thought correlates *The Island of the Day Before* as a postmodern mixture of science and superstition and reviews Baudolino as an historical fantastic novel that once again situates the Middle Ages in a postmodern context Eco's *Chaosmos* demonstrates how Eco's use of semiotic theory is important for an understanding of the postmodern aspects of today's literature and culture
