Metaphor And Cognition An Interactionist Approach:

Metaphor and Cognition B. Indurkha, 2013-03-09 Many metaphors go beyond pointing to the existing similarities between two objects they create the similarities Such metaphors which have been relegated to the back seat in most of the cognitive science research are the focus of attention in this study which addresses the creation of similarity within an elaborately laid out interactive framework of cognition Starting from the constructivist views of Nelson Goodman and Jean Piaget this framework resolves an apparent paradox in interactionism how can reality not have a mind independent ontology and structure but still manage to constrain the possible worlds a cognitive agent can create in it A comprehensive theory of metaphor is proposed in this framework that explains how metaphors can create similarities and why such metaphors are an invaluable asset to cognition The framework is then applied to related issues of analogical reasoning induction and computational modeling of creative metaphors *Metaphor and Analogy in Science Education* Peter J. Aubusson, Peter Aubusson, Allan G. Harrison, Steve Ritchie, 2006 This book brings together powerful ideas and new developments from internationally recognised scholars and classroom practitioners to provide theoretical and practical knowledge to inform progress in science education This is achieved through a series of related chapters reporting research on analogy and metaphor in science education Throughout the book contributors not only highlight successful applications of analogies and metaphors but also foreshadow exciting developments for research and practice Themes include metaphor and analogy best practice as reasoning for learning applications in teacher development in science education research philosophical and theoretical foundations Accordingly the book is likely to appeal to a wide audience of science educators classroom practitioners student teachers teacher educators and researchers

Metaphor Tony Veale, Ekaterina Shutova, Beata Beigman Klebanov, 2022-06-01 The literary imagination may take flight on the wings of metaphor but hard headed scientists are just as likely as doe eyed poets to reach for a metaphor when the descriptive need arises Metaphor is a pervasive aspect of every genre of text and every register of speech and is as useful for describing the inner workings of a black hole itself a metaphor as it is the affairs of the human heart The ubiquity of metaphor in natural language thus poses a significant challenge for Natural Language Processing NLP systems and their builders who cannot afford to wait until the problems of literal language have been solved before turning their attention to figurative phenomena This book offers a comprehensive approach to the computational treatment of metaphor and its figurative brethren including simile analogy and conceptual blending that does not shy away from their important cognitive and philosophical dimensions Veale Shutova and Beigman Klebanov approach metaphor from multiple computational perspectives providing coverage of both symbolic and statistical approaches to interpretation and paraphrase generation while also considering key contributions from philosophy on what constitutes the meaning of a metaphor This book also surveys available metaphor corpora and discusses protocols for metaphor annotation Any reader with an interest in metaphor from beginning researchers to seasoned scholars will find this

book to be an invaluable guide to what is a fascinating linguistic phenomenon

Computation for Metaphors, Analogy, and Agents Chrystopher L. Nehaniv, 2003-06-26 This volume brings together the work of researchers from various disciplines where aspects of descriptive mathematical computational or design knowledge concerning metaphor and analogy especially in the context of agents have emerged The book originates from an international workshop on Computation for Metaphors Analogy and Agents CMAA held in Aizu Japan in April 1998 The 19 carefully reviewed and revised papers presented together with an introduction by the volume editor are organized into sections on Metaphor and Blending Embodiment Interaction Imitation Situated Mapping in Space and Time Algebraic Engineering Respecting Structure and a Sea Change in Viewpoints

Prerational Intelligence: Adaptive Behavior and Intelligent Systems Without Symbols and Logic , Volume 1, Volume 2 Prerational Intelligence: Interdisciplinary Perspectives on the Behavior of Natural and Artificial Systems, Volume 3 Holk Cruse, Jeffrey Dean, Helge Ritter, 2013-11-11 The present book is the product of conferences held in Bielefeld at the Center for interdisciplinary Studies ZiF in connection with a year long ZiF Research Group with the theme Prerational intelligence The premise explored by the research group is that traditional notions of intelligent behavior which form the basis for much work in artificial intelligence and cognitive science presuppose many basic capabilities which are not trivial as more recent work in robotics and neuroscience has shown and that these capabilities may be best understood as emerging from interaction and cooperation in systems of simple agents elements that accept inputs from and act upon their surroundings The main focus is on the way animals and artificial systems process information about their surroundings in order to move and act adaptively The analysis of the collective properties of systems of interacting agents however is a problem that occurs repeatedly in many disciplines Therefore contributions from a wide variety of areas have been included in order to obtain a broad overview of phenomena that demonstrate complexity arising from simple interactions or can be described as adaptive behavior arising from the collective action of groups of agents To this end we have invited contributions on topics ranging from the development of complex structures and functions in systems ranging from cellular automata genetic codes and neural connectivity to social behavior and evolution Additional contributions discuss traditional concepts of intelligence and adaptive behavior 1

The Design of Computer Supported Cooperative Work and Groupware Systems Dan Shapiro, Michael Tauber, Roland Traunmüller, 1996-03-29 The phrases the information superhighway and the information society are on almost everyone's lips CSCW and groupware systems are the key to bringing those phrases to life To an extent that would scarcely have been imaginable a few years ago the contributions in this volume speak to each other and to a broader interdisciplinary context The areas of ethnography and design the requirements and principles of CSCW design CSCW languages and environments and the evaluation of CSCW systems are brought together to bring to light how activities in

working domains are really in practice carried out The aim above all is to do justice to the creativity and versatility of those whose work they aim to support

Law and Society Approaches to Cyberspace Paul Schiff Berman, 2017-11-28 During the past decade the rise of online communication has proven to be particularly fertile ground for academic exploration at the intersection of law and society Scholars have considered how best to apply existing law to new technological problems but they also have returned to first principles considering fundamental questions about what law is how it is formed and its relation to cultural and technological change This collection brings together many of these seminal works which variously seek to interrogate assumptions about the nature of communication knowledge invention information sovereignty identity and community From the use of metaphor in legal opinions about the internet to the challenges posed by globalization and deterritorialization to the potential utility of online governance models to debates about copyright free expression and privacy this collection offers an invaluable introduction to cutting edge ideas about law and society in an online era In addition the introductory essay both situates this work within the trajectory of law and society scholarship and summarizes the major fault lines in ongoing policy debates about the regulation of online activity

The Pragmatic Turn Andreas K. Engel, Karl J. Friston, Danica Kragic, 2022-06-07 Experts from a range of disciplines assess the foundations and implications of a novel action oriented view of cognition Cognitive science is experiencing a pragmatic turn away from the traditional representation centered framework toward a view that focuses on understanding cognition as enactive This enactive view holds that cognition does not produce models of the world but rather subserves action as it is grounded in sensorimotor skills In this volume experts from cognitive science neuroscience psychology robotics and philosophy of mind assess the foundations and implications of a novel action oriented view of cognition Their contributions and supporting experimental evidence show that an enactive approach to cognitive science enables strong conceptual advances and the chapters explore key concepts for this new model of cognition The contributors discuss the implications of an enactive approach for cognitive development action oriented models of cognitive processing action oriented understandings of consciousness and experience and the accompanying paradigm shifts in the fields of philosophy brain science robotics and psychology Contributors Moshe Bar Lawrence W Barsalov Olaf Blanke Jeannette Bohg Martin V Butz Peter F Dominey Andreas K Engel Judith M Ford Karl J Friston Chris D Frith Shaun Gallagher Antonia Hamilton Tobias Heed Cecilia Heyes Elisabeth Hill Matej Hoffmann Jakob Hohwy Bernhard Hommel Atsushi Iriki Pierre Jacob Henrik J Rntell J rgen Jost James Kilner G nther Knoblich Peter K nig Danica Kragic Miriam Kyselo Alexander Maye Marek McGann Richard Menary Thomas Metzinger Ezequiel Morsella Saskia Nagel Kevin J O Regan Pierre Yves Oudeyer Giovanni Pezzulo Tony J Prescott Wolfgang Prinz Friedemann Pulverm ller Robert Rupert Marti Sanchez Fibla Andrew Schwartz Anil K Seth Vicky Southgate Antonella Tramacere John K Tsotsos Paul F M J Verschure Gabriella Vigliocco Gottfried Vosgerau

Essays on the Song Cycle and on Defining the Field , 2022-07-18 This volume assembles twelve interdisciplinary essays that were originally presented at the Second International Conference

on Word and Music Studies at Ann Arbor MI in 1999 a conference organized by the International Association for Word and Music Studies WMA The contributions to this volume focus on two centres of interest The first deals with general issues of literature and music relations from culturalist historical reception aesthetic and cognitive points of view It covers issues such as conceptual problems in devising transdisciplinary histories of both arts cultural functions of opera as a means of reflecting postcolonial national identity the problem of verbalizing musical experience in nineteenth century aesthetics and of understanding reception processes triggered by musicalized fiction The second centre of interest deals with a specific genre of vocal music as an obvious area of word and music interaction namely the song cycle As a musico literary genre the song cycle not only permits explorations of relations between text and music in individual songs but also raises the question if and to what extent words and or music contribute to creating a larger unity beyond the limits of single songs Elucidating both of these issues with stimulating diversity the essays in this section highlight classic nineteenth and twentieth century song cycles by Franz Schubert Robert Schumann Hugo Wolf Richard Strauss and Benjamin Britten and also include the discussion of a modern successor of the song cycle the concept album as part of today s popular culture

Metaphor and Intercultural Communication Andreas Musolff, Fiona MacArthur, Giulio Pagani, 2014-05-20 Metaphor and Intercultural Communication examines in detail the dynamics of metaphor in interlingual contact translation and globalization processes Its case studies which combine methods of cognitive metaphor theory with those of corpus based and discourse oriented research cover contact linguistic and cultural contacts between Chinese English including Translational English and Aboriginal English Greek Kabyle Romanian Russian Serbian and Spanish Part I introduces readers to practical and methodological problems of the intercultural transfer of metaphor through empirical corpus based and experimental studies of translators experiences and strategies in dealing with figurative language in a variety of contexts Part II explores the universality relativity dimension of cross and intercultural metaphor on the basis of empirical data from various European and non European cultures Part III investigates the socio economic and political consequences of figurative language use through case studies of communication between aboriginal and mainstream cultures in the media in political discourse and gender related discourses Special attention is paid to cases of miscommunication and of deliberate re and counter conceptualisation of clichés from one culture into another The results open new perspectives on some of the basic assumptions of the classic cognitive paradigm e g regarding metaphor understanding linguistic relativity and concept construction

Intelligent Systems and Applications Yaxin Bi, Rahul Bhatia, Supriya Kapoor, 2019-08-23 The book presents a remarkable

collection of chapters covering a wide range of topics in the areas of intelligent systems and artificial intelligence and their real world applications It gathers the proceedings of the Intelligent Systems Conference 2019 which attracted a total of 546 submissions from pioneering researchers scientists industrial engineers and students from all around the world These submissions underwent a double blind peer review process after which 190 were selected for inclusion in these proceedings As intelligent systems continue to replace and sometimes outperform human intelligence in decision making processes they have made it possible to tackle a host of problems more effectively This branching out of computational intelligence in several directions and use of intelligent systems in everyday applications have created the need for an international conference as a venue for reporting on the latest innovations and trends This book collects both theory and application based chapters on virtually all aspects of artificial intelligence presenting state of the art intelligent methods and techniques for solving real world problems along with a vision for future research it represents a unique and valuable asset

Cognitive Linguistics: Basic Readings Dirk Geeraerts, 2008-08-22 Over the past decade Cognitive Linguistics has grown to be one of the most broadly appealing and dynamic frameworks for the study of natural language Essentially this new school of linguistics focuses on the meaning side of language linguistic form is analysed as an expression of meaning And meaning itself is not something that exists in isolation but it is integrated with the full spectrum of human experience the fact that we are embodied beings just as much as the fact that we are cultural beings Cognitive Linguistics Basic Readings brings together twelve foundational articles each of which introduces one of the basic concepts of Cognitive Linguistics like conceptual metaphor image schemas mental spaces construction grammar prototypicality and radial sets The collection features the founding fathers of Cognitive Linguistics George Lakoff Ron Langacker Len Talmy Gilles Fauconnier and Charles Fillmore together with some of the most influential younger scholars By its choice of seminal papers and leading authors Basic Readings is specifically suited for an introductory course in Cognitive Linguistics This is further supported by a general introduction to the theory and specifically the practice of Cognitive Linguistics and by trajectories for further reading that start out from the individual chapters

The Construction of Scientific Knowledge through Metaphor Tomasz Fojt, 2009 That metaphor is used in science is hardly a contentious issue Extensive literature on the topic testifies to the widespread employment of metaphor in scientific texts According to the received view however metaphor is a periphrastic as if device which has no bearing on the deliberative content of scientific theories Metaphorical reasoning is taken to be epiphenomenal a corollary to which is that metaphorical meaning is in principle reducible to equivalent literal meaning for discussion see section 5.2.1 Consequently metaphors are considered ancillary in science and tend to be ascribed a marginal role as heuristic or exegetical tools to be used for pedagogical purposes Contrary to this restrictive view on the function of metaphor in science this study seeks to present the role of metaphor as both more significant and versatile The aim of the study is to establish the mechanism of conceptual metaphor as operative in the constitution of scientific theories Implicit in the thesis is the claim that metaphors are not merely linguistic expressions but they are primarily a matter of reasoning Thus a prerequisite to an investigation of the role of metaphor in scientific theory articulation is demonstrating that metaphor operates at the level of conceptualisation Only then can it be legitimately posited as a conceptual instrument of abstract reason To this end a framework of cognition is introduced in section IV in which metaphor is characterised naturally as a protective cognitive device whereby the cognitive agent establishes meaningful relationships between concepts and segments of external reality

Metaphor and Communication Elisabetta Gola, Francesca Ervas, 2016-02-24 This collection of papers presents different views on metaphor in communication The overall aim is to show that the communicative dimension of metaphor cannot be reduced to its conceptual and/or linguistic dimension The volume addresses two main questions does the communicative dimension of metaphor have specific features that differentiate it from its linguistic and cognitive dimensions And how could these specific properties of communication change our understanding of the linguistic and cognitive dimensions of metaphor The authors of the papers collected in this volume offer answers to these questions that raise new interests in metaphor and communication

Cognitive Exploration of Language and Linguistics René Dirven, Marjolyn Verspoor, 2004-01-01 Cognitive Exploration of Language and Linguistics is designed as a comprehensive introductory text for first and second year university students of language and linguistics It provides a chapter on each of the more established areas in linguistics such as lexicology morphology syntax phonetics and phonology historical linguistics and language typology and on some of the newer areas such as cross cultural semantics pragmatics text linguistics and contrastive linguistics In each of these areas language is explored as part of a cognitive system comprising perception emotion categorisation abstraction processes and reasoning All these cognitive abilities may interact with language and be influenced by language Thus the study of language in a sense becomes the study of the way we express and exchange ideas and

thoughts This Second Revised Edition is corrected updated and expanded Cognitive Exploration of Language and Linguistics is clearly presented and organized after having been tested in several courses in various countries Includes exercises solutions to be found on the Internet The Logic of Metaphor Eric Steinhart, 2013-06-29 1 Metaphors and Logic Metaphors are among the most vigorous offspring of the creative mind but their vitality springs from the fact that they are logical organisms in the ecology of language I aim to use logical techniques to analyze the meanings of metaphors My goal here is to show how contemporary formal semantics can be extended to handle metaphorical utterances What distinguishes this work is that it focuses intensely on the logical aspects of metaphors I stress the role of logic in the generation and interpretation of metaphors While I don't presuppose any formal training in logic some familiarity with philosophical logic the propositional calculus and the predicate calculus is helpful Since my theory makes great use of the notion of structure I refer to it as the structural theory of metaphor STM STM is a semantic theory of metaphor if STM is correct then metaphors are cognitively meaningful and are not trivially logically linked with truth I aim to extend possible worlds semantics to handle metaphors I'll argue that some sentences in natural languages like English have multiple meanings Juliet is the sun has at least two meanings the literal meaning Juliet is the sun and the metaphorical meaning Juliet is the sun MET Each meaning is a function from possible worlds to truth values I deny that these functions are identical I deny that the metaphorical function is necessarily false or necessarily true
