Method In Ecology Strategies For Conservation:

Method in Ecology Kristin S. Shrader-Frechette, Earl D. McCoy, 1993-09-30 In this volume the authors discuss what practical contributions ecology can and can't make in applied science and environmental problem solving In the first section they discuss conceptual problems that have often prevented the formulation and evaluation of powerful precise general theories explain why island biogeography is still beset with controversy and examine the ways that science is value laden In the second section they describe how ecology can give us specific answers to practical environmental questions posed in individual case studies and argue for a new way to look at scientific error A case study using the Florida panther is examined in the light of these findings

A Companion to Environmental Philosophy Dale Jamieson, 2008-04-15 A Companion to Environmental Philosophy is a pioneering work in the burgeoning field of environmental philosophy This ground breaking volume contains thirty six original articles exemplifying the rich diversity of scholarship in this field Contains thirty six original articles written by international scholars Traces the roots of environmental philosophy through the exploration of cultural traditions from around the world Brings environmental philosophy into conversation with other fields and disciplines such as literature economics ecology and law Discusses environmental problems that stimulate current debates

Sustainability Indicators in Practice Agnieszka Latawiec, Dorice Agol, 2016-01-29 A unique book which reflects the multifaceted nature of sustainability by bringing together authors from interdisciplinary backgrounds The book highlights the opportunities and challenges associated with applying sustainability indicators in different socio cultural and geographical settings It presents a range of possible solutions to common challenges associated with the use of indicators in practice

The Philosophy of Ecology David R. Keller, Frank B. Golley, 2000 This is the first introductory anthology on the philosophy of ecology edited by an ecologist and a philosopher It illustrates the range of philosophical approaches available to ecologists and provides a basis for understanding the thinking on which many of today's environmental ideas are founded Collectively these seminal readings make a powerful statement on the value of ecological knowledge and thinking in alleviating the many problems of modern industrial civilization Issues covered include the challenges of defining scientific ecology tracing its genealogy and distinguishing the science from various forms of ecological like thinking the ontology of ecological entities and processes selected concepts of community stability diversity and niche the methodology of ecology rationalism and empiricism reductionism and holism the significance of evolutionary law for ecological science

Effective Ecological Monitoring Gene Likens, David Lindenmayer, 2018-05-01 Long term monitoring programs are fundamental to understanding the natural environment and managing major environmental problems Yet they are often done very poorly and ineffectively This second edition of the highly acclaimed Effective Ecological Monitoring describes what makes monitoring programs successful and how to ensure that long term monitoring studies persist The book has been fully revised and updated but remains concise illustrating key aspects of effective monitoring with case studies and examples It includes new sections

comparing surveillance based and question based monitoring analysing environmental observation networks and provides examples of adaptive monitoring Based on the authors 80 years of collective experience in running long term research and monitoring programs Effective Ecological Monitoring is a valuable resource for the natural resource management ecological and environmental science and policy communities

Grounding Global Climate Change Heike Greschke, Julia Tischler, 2014-09-25 This book traces the evolution of climate change research which long dominated by the natural sciences now sees greater involvement with disciplines studying the socio cultural implications of change In their introduction the editors chart the changing role of the social and cultural sciences delineating three strands of research socio critical approaches which connect climate change to a call for cultural or systemic change a mitigation and adaption strand which takes the physical reality of climate change as a starting point and focuses on the concerns of climate change affected communities and their participation in political action and finally culture sensitive research which places emphasis on indigenous peoples who contribute the least to the causes of climate change who are affected most by its consequences and who have the least leverage to influence a solution Part I of the book explores interdisciplinarity climate research and the role of the social sciences including the concept of ecological novelty an assessment of progress since the first Rio climate conference and a global village case study from Portugal Part II surveys ethnographic perspectives in the search for social facts of global climate change including climate and mobility in the West African Sahel and human non human interactions and climate change in the Canadian Subarctic Part III shows how collaborative and comparative ethnographies can spin global webs of local knowledge describing case studies of changing seasonality in Labrador and of rising water levels in the Chesapeake Bay These perspectives are subjected to often amusing always incisive analysis in a concluding chapter entitled You Ain t Seen Nothing Yet a death defying look at the future of the climate debate The contributors engage critically with the research subject of climate change itself reflecting on their own practices of knowledge production and epistemological presuppositions Finely detailed and sympathetic to a broad range of viewpoints the book sets out a profile for the social sciences and humanities in the climate change field by systematically exploring methodological and theoretical challenges and approaches

A New Environmental Ethics Holmes Rolston III, 2012-04-23 No one looking ahead at the middle of the last century could have foreseen the extent and the importance of the ensuing environmental crises Now more than a decade into the next century no one can ignore it *A New Environmental Ethics the Next Millennium for Life on Earth* offers clear powerful and oftentimes moving thoughts from one of the first and most respected philosophers to write on the environment Rolston an early and leading pioneer in studying the moral relationship between humans and the earth surveys the full spectrum of approaches in the field of environmental ethics This book however is not simply a judicious overview Instead it offers critical assessments of contemporary academic accounts and draws on a lifetime of research and experience to suggest an outlook for the future As a result this focused forward looking analysis will be a necessary complement to any balanced

textbook or anthology in environmental ethics and will teach its readers to be responsible global citizens and residents of their landscape helping ensure that the future we have will be the one we wish for

Ecosystem Functioning Kurt Jax, 2010-09-16 A new and integrative analysis of the concept of ecosystem functioning providing guidance for its application in conservation practice

Mountain Area Research and Management Martin F. Price, 2013-06-17 This book brings together scientists and practitioners from five continents to present their experience in undertaking activities that contribute to our understanding and informed management of mountain areas In particular they address the challenges of working in interdisciplinary teams and of effectively involving stakeholders The result is a powerful book that integrates research from different disciplines in the natural and social sciences and in some cases indigenous knowledge to address the question of how knowledge is gained about mountain areas and how can it be integrated and used in effective management A comprehensive introduction covers the challenges in mountain area research and management and the need for integrated approaches This is followed by chapters that look at key areas of mountain research and management over the past 25 years covering inter and trans disciplinary research subsistence cultures and sustainable development innovations in watershed management and biodiversity conservation Subsequent chapters cover key areas of research and management on five continents with a focus on comparison of common challenges and solutions across regions The concluding chapter brings these experiences together Published with Parks Canada

Ecological Understanding Steward T.A. Pickett, Jurek Kolasa, Clive G. Jones, 2010-08-04 This widely anticipated revision of the groundbreaking book Ecological Understanding updates this crucial sourcebook of contemporary philosophical insights for practicing ecologists and graduate students in ecology and environmental studies The second edition contains new ecological examples an expanded array of conceptual diagrams and illustrations new text boxes summarizing important points or defining key terms and new reference to philosophical issues and controversies Although the first edition was recognized for its clarity this revision takes the opportunity to make the exposition of complex topics still clearer to readers without a philosophical background Readers will gain an understanding of the goals of science the structure of theory the kinds of theory relevant to ecology the way that theory changes what constitutes objectivity in contemporary science and the role of paradigms and frameworks for synthesis within ecology and in integration with other disciplines Finally how theory can inform and anchor the public use of ecological knowledge in civic debates is laid out This new edition refines the understanding of how the structure and change of theory can improve the growth and application of one of the 21st century's key sciences Explains the philosophical basis of ecology in plain English Contains chapter overviews and summaries Text boxes highlight key points examples or controversies Diagrams explain structure and development of theory and integration Evaluates and relates paradigms in ecology Illustrates philosophical issues with classic and new ecological research

Recognizing the Autonomy of Nature Thomas Heyd, 2005-11-09 How do the ways in which we think about and describe nature shape the use and protection of the

environment Do our seemingly well intentioned efforts in environmental conservation reflect a respect for nature or our desire to control nature s wildness The contributors to this collection address these and other questions as they explore the theoretical and practical implications of a crucial aspect of environmental philosophy and policy the autonomy of nature In focusing on the recognition and meaning of nature s autonomy and linking issues of metaphysics epistemology ethics and policy the essays provide a variety of new perspectives on human relationships to nature The authors begin by exploring what is meant by nature in what sense it can be seen as autonomous and what respect for the autonomy of nature might entail They examine the conflicts that arise between the satisfaction of human needs food shelter etc and the natural world The contributors also consider whether the activities of human beings contribute to nature s autonomy In their investigation of these issues they not only draw on philosophy and ethics they also discuss how the idea of nature s autonomy affects policy decisions regarding the protection of agricultural rural and beach areas The essays in the book s final section turn to management and restoration practices The essays in this section pay close attention to how efforts at environmental protection alter or reinforce the traditional relationship between humans and nature More specifically the contributors examine whether management practices as they are applied in nature conservation actually promote the autonomy of nature or whether they turn the environment into a client for policymakers

Defending Illusions Allan K. Fitzsimmons,1999

Fitzsimmons examines the science philosophy and law of ecosystems management and shows how efforts to make federal protection of ecosystems the centerpiece of national environmental policy are driven by religious veneration of Mother Earth wrapped in a veil of weak science

Biodiversity and Environmental Change Emma Burns,Andrew Lowe,Nicole

Thurgate,David Lindenmayer,2014-02-06 This data rich book demonstrates the value of existing national long term ecological research in Australia for monitoring environmental change and biodiversity Long term ecological data are critical for informing trends in biodiversity and environmental change The Terrestrial Ecosystem Research Network TERN is a major initiative of the Australian Government and one of its key areas of investment is to provide funding for a network of long term ecological research plots around Australia LTERN LTERN researchers and other authors in this book have maintained monitoring sites often for one or more decades in an array of different ecosystems across the Australian continent ranging from tropical rainforests wet eucalypt forests and alpine regions through to rangelands and deserts This book highlights some of the temporal changes in the environment that have occurred in the various systems in which dedicated field based ecologists have worked Many important trends and changes are documented and they often provide new insights that were previously poorly understood or unknown These data are precisely the kinds of data so desperately needed to better quantify the temporal trajectories in the environment in Australia By presenting trend patterns and often also the associated data the authors aim to catalyse governments and other organisations to better recognise the importance of long term data collection and monitoring as a fundamental part of ecologically effective and cost effective management of the environment and

biodiversity **Forest Pattern and Ecological Process** David Lindenmayer, 2009 Forest Pattern and Ecological Process is a major synthesis of 25 years of intensive research about the montane ash forests of Victoria which support the world's tallest flowering plants and several of Australia's most high profile threatened and or endangered species. It draws together major insights based on over 170 published scientific papers and books offering a previously unrecognised set of perspectives of how forests function. The book combines key strands of research on wildfires biodiversity conservation logging conservation management climate change and basic forest ecology and management. It is divided into seven sections: introduction and background forest cover and the composition of the forest the structure of the forest animal occurrence disturbance regimes forest management and overview and future directions. Illustrated with more than 200 photographs and line drawings Forest Pattern and Ecological Process is an essential reference for forest researchers resource managers conservation and wildlife biologists ornithologists and mammalogists and policy makers as well as general readers with interests in wildlife and forests. Features: The extent of synthesis at a range of key levels The depth of new perspectives on forest processes and ecological patterns in one of the world's truly great forests the montane ash forests The breadth of past and very current research that is both pure and applied The range of key topics and how they are intertwined wildfires biodiversity conservation logging conservation management climate change and basic forest ecology and management.

The Terrestrial Biosphere S.T. Trudgill, 2014-09-25 Terrestrial Biosphere tries to pose the questions which underlie the many sided debate of how to respond to and influence change. How should we view nature? What do we do for the best? How should we act? What are we trying to achieve and what should we be guided by? In doing so the book introduces and attempts to analyse not only scientific aspects of the debate but also cultural attitudes and values. The notions of ecosystem stability are now challenged and it is also clear that ecosystems are renewable but not repeatable. It finds that prescriptive solutions based on current constructs may not be adequate. Feeling that analysis should lead to advocacy the author believes that if we can't improve predictability we have to increase adaptability which means that ecological and social capacity building should be advocated. This is seen in terms of concepts institutions attitudes and values which allow for a plurality of meanings and which can cope with surprise and unforeseen change and which also facilitates responses to change. **A Walk Up The Hill**

Madhav Gadgil, 2023-08-21 Madhav Gadgil was born in Pune in 1942 just as Salim Ali's superbly illustrated Book of Indian Birds was published. Influenced by his birdwatcher father he learnt to recognize birds from their pictures even before he could read. He is an unusual combination of a person fascinated by the diversity of the natural world of the landscapes and the life they support as well as the diversity of cultures and lifestyles of the people firmly rooted to India's soil. He has dedicated himself to intellectual pursuits ranging over mathematics natural and social sciences history and public policy. This book is an account of his life walking up and down the country's hills and dales watching peacocks dance and elephants prance living among fisherfolk on the west coast horticulturists on Western Ghats and the tribals of Manipur and

Maharashtra all the while being a part of a vibrant scientific community *Wildlife Review* ,1994 **Predicting Species Occurrences** J. Michael Scott, Patricia Heglund, Michael L. Morrison, 2002-02 Predictions about where different species are where they are not and how they move across a landscape or respond to human activities if timber is harvested for instance or stream flow altered are important aspects of the work of wildlife biologists land managers and the agencies and policymakers that govern natural resources Despite the increased use and importance of model predictions these predictions are seldom tested and have unknown levels of accuracy Predicting Species Occurrences addresses those concerns highlighting for managers and researchers the strengths and weaknesses of current approaches as well as the magnitude of the research required to improve or test predictions of currently used models The book is an outgrowth of an international symposium held in October 1999 that brought together scientists and researchers at the forefront of efforts to process information about species at different spatial and temporal scales It is a comprehensive reference that offers an exhaustive treatment of the subject with 65 chapters by leading experts from around the world that review the history of the theory and practice of modeling and present a standard terminology examine temporal and spatial scales in terms of their influence on patterns and processes of species distribution offer detailed discussions of state of the art modeling tools and descriptions of methods for assessing model accuracy discuss how to predict species presence and abundance present examples of how spatially explicit data on demographics can provide important information for managers An introductory chapter by Michael A. Huston examines the ecological context in which predictions of species occurrences are made and a concluding chapter by John A. Wiens offers an insightful review and synthesis of the topics examined along with guidance for future directions and cautions regarding misuse of models Other contributors include Michael P. Austin, Barry R. Noon, Alan H. Fielding, Michael Goodchild, Brian A. Maurer, John T. Rotenberry, Paul Angermeier, Pierre R. Vernier and more than a hundred others Predicting Species Occurrences offers important new information about many of the topics raised in the seminal volume *Wildlife 2000* University of Wisconsin Press 1986 and will be the standard reference on this subject for years to come Its state of the art assessment will play a key role in guiding the continued development and application of tools for making accurate predictions and is an indispensable volume for anyone engaged in species management or conservation *Palgrave Advances in International Environmental Politics* M. Betsill, K. Hochstetler, D. Stevis, 2005-10-31 *Palgrave Advances in International Environmental Politics* provides a state of the art review of the major theoretical approaches and substantive debates of the field The first section reviews the historical development of international environmental politics as well as the theoretical and methodological approaches used in its study The following chapters each review the trajectory of a key research area within international environmental politics and elaborate on current approaches and debates Case studies in each chapter illuminate the main theoretical questions that emerge from the review *Biodiversity and Environmental Philosophy* Sahotra Sarkar, 2005-09-19 This book explores the epistemological and ethical issues at the foundations of environmental

philosophy emphasising the conservation of biodiversity Sahota Sarkar criticises attempts to attribute intrinsic value to nature and defends an anthropocentric position on biodiversity conservation based on an untraditional concept of transformative value Unlike other studies in the field of environmental philosophy this book is as much concerned with epistemological issues as with environmental ethics It covers a broad range of topics including problems of explanation and prediction in traditional ecology and how individual based models and Geographic Information Systems GIS technology is transforming ecology Introducing a brief history of conservation biology Sarkar analyses the consensus framework for conservation planning through adaptive management He concludes with a discussion of directions for theoretical research in conservation biology and environmental philosophy
