Humanité face au changement climatique (L') Robert Dautray, Jacques Lesourne, 2009-10-29 L'humanité est confrontée pour la première fois de son histoire à un phénomène de changement global de l'écosphère qui l'engage dans une longue transition et dont les répercussions seront à la fois économiques, sociales et politiques. Tous les pays, toutes les activités humaines en seront affectés. Les problèmes qui vont en résulter peuvent être résolus par des adaptations de comportement, des déplacements géographiques et par la mise en œuvre de grandes technologies existantes ou en cours de développement. L'heure n'est pas de rejeter la technologie mais d'intensifier les efforts pour la développer tout en veillant à l'orienter en fonction des besoins réels des hommes. Robert Dautray, scientifique et ingénieur, et Jacques Lesourne, économiste et prospectiviste, se sont unis à l'occasion de cet ouvrage pour mettre en commun leurs connaissances complémentaires et apporter des réponses aux questions engendrées par les conséquences du changement climatique auxquelles nous devons dès aujourd'hui faire face.

Robert Dautray, membre de l'Académie des sciences et de l'Académie des technologies, a notamment présidé des comités des programmes scientifiques et du Comité d'observation opérationnelle de la Terre du CNES et haut commissaire à l'énergie atomique. Il est notamment l'auteur de *Quelles énergies pour demain*. Jacques Lesourne est membre de l'Académie des technologies. Il a présidé de l'Association française de science économique et ancien directeur du journal *Le Monde*. Il a récemment publié *Les Crises et le XXI^e siècle*.

Environmental Isotopes in Hydrogeology Ian D. Clark, Peter Fritz, 1997-07-23

Groundwater is an increasingly important resource to human populations around the world and the study and protection of groundwater is an essential part of hydrogeology, the subset of hydrology that concentrates on the subsurface. Environmental isotopes, naturally occurring nuclides in water and solutes, have become fundamental tools for tracing the recharge history and contamination of groundwater.

Greater Khorasan Rocco Rante, 2015-03-10 The modern sense of Greater Khorasan today corresponds to a territory which not only comprises the region in the east of Iran but also beyond Iranian frontiers a part of Afghanistan and Turkmenistan In the past this entity was simply defined as Khorasan In the Sassanid era Khorasan defined the Eastern lands In the Islamic era this term was again taken up in the same sense it previously enjoyed The Arab sources of the first centuries all mention the eastern regions under the same toponym Khorasan Khorasan was the gateway used by Alexander the Great to go into Bactria and India and inversely that through which the Seljuks and Mongols entered Iran In a diachronic context Khorasan was a transit zone a passage a crossroads which above all in the medieval period saw the creation of different commercial routes leading to the north towards India to the west and into China In this framework archaeological researches will be the guiding principle which will help us to take stock of a material culture which as its history is very diversified They also offer valuable elements on commercial links between the principal towns of Khorasan This book will provide the opportunity to better know the most recent elements of the principal constitutive sites of this geographical and political entity
