Schmidt,1970      **Strategies and methods for implementing CE in construction activities in the Nordic countries: supporting cases** Wahlström, Margareta, zu Castell-Rüdenhausen, Malin, Fruergaard Astrup, Thilde, Oberender, Anke, Jensen, Carl, Johansson, Pernilla, Wærner, Eirik, 2021-04-12 Available online <https://pub.norden.org/temanord2021/508>

The national strategies for a circular economy set the overall targets for implementation of circular economy in the country. Putting theory into practice via local strategies can be a good means for the transition towards a circular economy in the construction sector. Municipalities can set demands for CE solutions by requiring e.g. the use of recycled and/or recyclable construction materials, the application of design for disassembly principles in construction and requiring resource mapping and reuse and recycling in the demolition phase. The study identifies and presents cases and experiences from the implementation of CE concepts at the local level in the Nordic communities with a focus on construction renovation and demolition. Barriers and drivers for the uptake of CE solutions are analysed and enabling factors that could support the implementation of circular economy concepts and identified barriers in norms, legislation and guidelines are described. As part of the project, the project group gave 10 policy recommendations.

Research Methods for the Architectural Profession Ajla Aksamija, 2021-03-03. Research Methods for the Architectural Profession introduces research as a systematic process, describes how to formulate research questions, provides an in-depth explanation of different research methods (qualitative, quantitative and experimental) and explains how to select appropriate research methods and execute research studies. It describes the process of documentation, knowledge dissemination and application of research results in architectural design and practice. Most importantly, it provides guidelines for integrating research into profession and uses extensive case studies and practice-relevant examples to illustrate main concepts, procedures and applications. Integrating research into practice is essential for developing new knowledge, solving design and technical problems, overcoming different types of challenges present in the contemporary profession and improving the design outcomes. Innovation requires a much stronger correlation between research and design, and it is pertinent for the future of architectural practice that research becomes an integral part of architectural profession. This book provides a roadmap for successfully integrating research into architectural design and for establishing innovative practices regardless of a firm's size. Written by an architecture professor with an extensive research and professional background, specifically focusing on integrating research into practice and richly illustrated with over 150 color images, this reference will be useful for both students and practitioners.

An Introduction to Architectural Conservation Nick Lee Evans, 2019-07-25. There are over half a million listed buildings in Britain; conservation areas can be found in every borough, and a large proportion of our housing stock pre-dates 1914. So whether in extending a listed house, reordering a local church or converting an historic warehouse, most architects will work with historic buildings at some point in their career, even if they are not a specialist conservation architect. An Introduction to Architectural Conservation introduces non-specialist architects to the principles behind legislation concerning historic

buildings It will help them understand the practicalities of this legislation the aims and objectives of Conservation Offices Statutory Amenity Societies and other guardians of our heritage With these skills readers can advise clients more accurately make successful listed building applications and ensure their interventions are sensitive appropriate and effective An Introduction to Architectural Conservation is also a practical guide to good working practice taking readers through the process of preparing a listed building application preparing a suitable tender package and administering the contract
