Combustion in Piston Engines A. K. Oppenheim,2013-03-09 Upon an exponential growth of life on earth supported by a century of oil based energy economy following a century of its coal based phase the world we live in is facing a point of inflection at the threshold of an exponential decay It is in fact the quest for counteracting its dreaded consequences that are bound to follow which half a century ago provided the stimulus for launching the space program Coal and oil are made out of carbon and hydrogen atoms Hydrocarbon molecules consisting of these atoms are the essential ingredients of life by providing energy in a remarkably compact form This property is due to the fact that hydrocarbons by themselves are not highly energetic materials The energy is derived from them by chemical reaction with oxygen supplied by the surrounding air This reaction provides heat and is referred to for that reason as exothermic The mass of oxidizer it requires is in fact 3.5 if

it is provided by oxygen alone or 15 if it is supplied by air times larger than that of the hydrocarbon For vehicular transport where the fuel has to be carried on board this feature is of particular significance

Development of a telemetry system for monitoring piston characteristics inside combustion engines Paul Lagaly,2024-05-06 This project aimed to develop a compact and lightweight telemetry system that mechanically decouples measurements enabling versatile applications across different measurement scenarios particularly for pistons and other moving systems Utilizing an ESP8266 a printed circuit board design was created from individually tested integrated circuits which formed the foundation for measuring various physical variables Given the challenging conditions inside a piston of an internal combustion engine ensuring high robustness was paramount during the electrical engineering process to prevent failures due to high temperatures and acceleration levels Alongside the installation process for thermocouples software for energy efficient measurement with customizable resolution and optional transmission via Wi Fi or internal storing was developed Demonstrating feasibility during full load operation of a heavy duty diesel engine the telemetry system with a high resolution surface thermocouple was integrated in one piston to establish a method for assigning crank angles enabling measurement and transmission of surface temperatures with crank angle resolution Further series of measurements including the use of alternative fuels were conducted with a third piston expanding the findings The outcome is an innovative telemetry measurement device capable of recording experimental data from moving components potentially expediting market solutions by reducing development times

Vehicle Propulsion Systems Lino Guzzella,Antonio Sciarretta,2012-12-25 This text provides an introduction to the mathematical modeling and subsequent optimization of vehicle propulsion systems and their supervisory control algorithms Automobiles are responsible for a substantial part of the world s consumption of primary energy mostly fossil liquid hydrocarbons and the reduction of the fuel consumption of these vehicles has become a top priority Increasing concerns over fossil fuel consumption and the associated environmental impacts have motivated many groups in industry and academia to propose new propulsion systems and to explore new optimization methodologies This third edition has been prepared to include many of these developments In the third edition exercises are included at the end of each chapter and the solutions are available on the web

Hcci and Cai Engines for the Automotive Industry H Zhao,2007-08-02 Homogeneous charge compression ignition HCCI controlled auto ignition CAI has emerged as one of the most promising engine technologies with the potential to combine fuel efficiency and improved emissions performance offering reduced nitrous oxides and particulate matter alongside efficiency comparable with modern

diesel engines Despite the considerable advantages its operational range is rather limited and controlling the combustion timing of ignition and rate of energy release is still an area of on going research Commercial applications are however close to reality HCCI and CAI engines for the automotive industry presents the state of the art in research and development on an international basis as a one stop reference work The background to the development of HCCI CAI engine technology is described Basic principles the technologies and their potential applications strengths and weaknesses as well as likely future trends and sources of further information are reviewed in the areas of gasoline HCCI CAI engines diesel HCCI engines HCCI CAI engines with alternative fuels and advanced modelling and experimental techniques The book provides an invaluable source of information for scientific researchers R D engineers and managers in the automotive engineering industry worldwide Presents the state of the art in research and development on an international basis An invaluable source of information for scientific researchers R D engineers and managers in the automotive engineering industry worldwide Looks at one of the most promising engine technologies around
