Bennett, 1998-03-06 Stratigraphy is the key to understanding the geological evolution of the earth It provides the framework for our interpretation of the sequences of events which have shaped the earth throughout its 4600 million years of existence It provides the timescale with which we can determine the relative order of these events and it provides the means whereby we can calibrate this using absolute ages in years Stratigraphy is therefore the most fundamental subject in the science of geology and all geologists are practising stratigraphers Traditionally however stratigraphy has been considered as a Victorian science a ponderous process of the naming and cataloguing of innumerable geological units most of which are of limited interest outside of a given geographical region This view has been challenged in recent years through the development of new techniques such as sequence stratigraphy cyclostratigraphy and chemostratigraphy which have greatly enhanced our capability to interpret earth history In this book many of the leading practitioners of modern stratigraphy have been gathered together to provide up to date and authoritative reviews of most of the important advances in the subject As such it is the only volume to provide a comprehensive treatment of modern stratigraphy at an advanced undergraduate level      **Biological Processes Associated with Impact Events** Charles Cockell, Christian Koeberl, Iain Gilmour, 2006-05-18 The biological effects of asteroid and comet impacts have been widely viewed as primarily destructive The role of an impactor in the K T boundary extinctions has had a particularly important influence on thinking concerning the role of impacts in ecological and biological changes th During the 10 and final workshop of the ESF IMPACT program during March 2003 we sought to investigate the wider aspects of the involvement of impact events in biological processes including the beneficial role of these events from the prebiotic through to the ecosystem level The ESF IMPACT programme 1998 2003 was an interdisciplinary effort that is aimed at understanding impact processes and their effects on the Earth environment including environmental geological and biological changes The
