Seismicity Caused by Mines, Fluid Injections, Reservoirs, and Oil Extraction Shahriar Talebi, 2012-12-06 The perturbation of the earth by mankind causes earthquakes in a variety of situations This phenomenon continues to be a major concern to engineers and scientists concerned with the mitigation of the consequences of this seismicity as well as better understanding the processes at its origin The present volume contains twelve papers from six countries dealing with observations of triggered and induced seismicity in four continents The reported cases include seismicity due to hard rock mines coal mines underground research facilities for nuclear waste disposal water injections reservoirs aquifers and oil fields This volume provides case studies of previously unavailable observations of this phenomenon investigations of the cause and source mechanism of seismic events studies of source location distributions determinations of seismic source parameters cases of the use of such parameters in assessing rockburst hazard in mines and measurements of velocity an attenuation properties of rock masses The present collection of papers provides an excellent indication of the current state of the art and new developments in this area of research *Seismicity Caused By Mines, Fluid Injections, Reservoirs, and Oil Extraction* Shahriar Talebi, 1999 Reprint from Pure and Applied Geophysics PAGEOPH Volume 153 1998 No 1 **Advances in Geophysics** , 2000-10-17 This series provides a venue for longer reviews of current advances in geophysics Written at a level accessible to graduate students the articles serve to broaden knowledge of various fields and may be useful in courses and seminars The Mechanism of Induced Seismicity Cezar I. Trifu, 2012-12-06 Underground Injection Science and Technology C-F. Tsang, J.A. Apps, 2005-12-28 Chapters by a distinguished group of international authors on various aspects of Underground Injection Science and Technology are organized into seven sections addressing specific topics of interest In the first section the chapters focus on the history of deep underground injection as well regulatory issues future trends and risk analysis The next section contains ten chapters dealing with well testing and hydrologic modeling Section 3 consisting of five chapters addresses various aspects of the chemical processes affecting the fate of the waste in the subsurface environment Consideration is given here to reactions between the waste and the geologic medium and reactions that take place within the waste stream itself The remaining four sections deal with experience relating to injection of respectively liquid wastes liquid radioactive wastes in Russia slurried solids and compressed carbon dioxide Chapters in Section 4 cover a diverse range of other issues concerning the injection of liquid wastes including two that deal with induced seismicity In Section 5 Russian scientists have contributed several chapters revealing their knowledge and experience of the deep injection disposal of high level radioactive liquid processing waste Section 6 consists of five chapters that cover the technology surrounding the injection disposal of waste slurries Among the materials considered are drilling wastes bone meal and biosolids Finally four chapters in Section 7 deal with questions relating to carbon dioxide sequestration in deep sedimentary aquifers This subject is particularly topical as nations grapple with the problem of controlling the buildup of carbon dioxide in the atmosphere

Seismicity in Mines G. Gibowicz, 2012-12-06 Recent seismological research has focused on processes other than pure shear failure double couple as an alternative mechanism for some types of seismic events This has been stimulated by what appears to be anomalous focal mechanisms observed for several earthquakes of possible volcanic nature in the 1980 Mammoth Lakes California sequence JULIAN and SIPKIN 1985 SIPKIN 1986 Although studies have concentrated on earthquakes associated with magmatic processes possible non double couple seismic failure has been observed but not widely known in cases of mine seismicity in the past three decades Such cases have occurred on a world wide basis however no cases until now have been observed in the United States The existence of non double couple failure in mine seismicity has been controversial as it has been for tectonic volcanic earthquakes Several of the benchmark studies of mine seismicity in the deep South African gold mines have resulted in the belief that no fundamental distinction in the source mechanism exists between tectonic earthquakes and rock bursts MCGARR 1984 both types of events are the result of pure shear failure However the reported cases of implosional focal mechanisms for mine seismicity continue to increase in number and prolong the controversy During the summer of 1984 a three dimensional high resolution micro earthquake network was operated by Woodward Clyde Consultants WCC in the vicinity of two coal mines beneath Gentry Mountain in the eastern Wasatch Plateau of central Utah
