Europe David Buchan, 2014-12-25 PDF available for free on <http://martenscentre.eu/publications/refuelling-europe-roadmap-completing-single-energy-market> The Ukraine crisis has reignited debate in Europe surrounding the EU's lack of a fully functioning single energy market It has brought home to all member states the general need for a more coordinated energy policy even though they may differ on aspects of what needs to be done This research highlights that integration of the internal energy market should still be the EU's main instrument to reach its three goals of cost competitiveness security and emission reduction A roadmap for completing the single energy market is proposed based on a harmonised EU wide system of renewable energy subsidies and significant infrastructure investment in many Central and East European member states These smart investments would form part of a coherent long term investment plan for the European energy sector and would enable these member states to improve their energy security through greater investment in gas storage and interconnectors The goals of energy security affordability and sustainability have never been higher on the EU's agenda All three goals would be served if Europe truly unified its energy market National leaders have it in their hands to complete this slow and difficult integration process if they can just summon up the necessary political will to do so *Sharing Economy in Energy Markets*

Jianxiao Wang, Haiwang Zhong, Qing Xia, Gengyin Li, Ming Zhou, 2022-03-18 This book aims to incorporate an emerging successful business model i.e. sharing economy into energy markets thus digging out the potential merits and applications in multi energy sectors With the core idea access over ownership sharing economy enables the collaborative consumption of idle resources through advanced information and communications technology One critical challenge is to identify different market participants occupation while accordingly designing pricing mechanisms This book begins with an overview about the

recent development of sharing economy in energy fields and summarizes two energy market related issues that sharing economy can hopefully address One is how to quantify a marginal generator's contribution and thereby elicit truthful bidding under information asymmetry condition The other is how to distinguish renewable and distributed energy resources contribution and thus incentivize efficient aggregation considering increasing scale and uncertainty Then sharing economy mechanisms are proposed and designed from a game theory perspective On this basis the following chapters thoroughly investigate the specific problems in spot markets multi area markets renewable energy aggregation and energy systems integration Additionally the benefits brought by sharing economy are evaluated in terms of regional market bidding and transmission expansion deferral Finally the information and communications technologies related to sharing economy are modeled and analyzed Hopefully this book can greatly benefit the readers who are interested in energy economics and engineering
