Single Cell Protein II:

Single-cell Protein II Steven R. Tannenbaum, Daniel I. C. Wang, 1975 Single-cell Protein II Steven R. Tannenbaum, 1975 ABSTRACT Technical alternatives for the production of Single Cell Protein SCP and the operational and economic aspects of these alternatives are discussed Topics include 1 SCP for human and animal consumption 2 cell collection fermentation and protein extraction techniques 3 production and processing methods 4 uses of carob agricultural wastes cane coffee whey sulfite liquor methane and yeast in SCP production 5 evaluation methods 6 marketing procedures and 7 international applications and guidelines **Single Cell Protein** Israel Goldberg, 2013-03-13 In early 1973 I returned to Israel from a post doctoral fellowship at Harvard University and was accepted as a lecturer in the Department of Applied Microbiology at the Hebrew University of Jerusalem Shortly after my return Professor Richard Mateles who at that time was head of the Department suggested that I purchase a good and comprehensive book on single cell protein SCP in order to expand my general knowledge in the subject I had started then to work on that was microbial utilization of one carbon C compounds I Naturally I took his advice after all he was the Boss and bought the book which was the only general book published on this subject at that time and was based on papers presented at the First International Conference on Single Cell Protein held at the Massachusetts Institute of Technology M I T on October 1967 Mateles and Tannenbaum editors 1 Through this book I became acquainted with the world's hunger problem that existed in the past and ways in which it was to be solved by SCP products prepared from CO fossil based raw 2 materials and from wastes **Single-Cell Protein Safety for Animal and Human Feeding** Silvio Garattini, Silvio Pagliarunga, Nevin S. Scrimshaw, 2013-09-24 Single Cell Protein Safety for Animal and Human Feeding covers the proceedings of the Protein Calorie Advisory Group of the United Nations System Symposium Investigations On Single Cell Protein held at the Istituto di Ricerche Farmacologiche Mario Negri Milan Italy on March 31 April 1 1977 This text is divided into three parts The first part discusses taxonomy and pathogenicity including topics on strengths and weaknesses of traditional criteria in the systematics of yeasts DNA relatedness between physiologically similar strains and species of yeasts and studies of potential pathogenicity of industrial yeasts This book then explains the models of pathogenicity for yeasts of the genus Candida as well as the characteristics and comparative studies of this genus Metabolism and toxicology of odd numbered carbon chain fatty acids are also tackled which is the main topic of the second part of this book The last part is concerned mainly with the metabolism and toxicology of alkanes This publication will be invaluable to chemists and students of chemistry and related disciplines *Single Cell Protein* Jean A. Larson, 1990 *Single-cell Protein* Richard I. Mateles, Steven R. Tannenbaum, 1968 Bibliography of Agriculture, 1976 **Cumulated Index Medicus**, 1976 **Single Cell Protein Production from Lignocellulosic Biomass** Pratima Bajpai, 2017-07-28 This book focuses on bioconversion of lignocellulosic residues into single cell protein which offers an alternative to conventional proteins such as soybean meal egg protein or meat protein in animal feed that is not affected by the climate It

provides an overview of the general uses of lignocellulosic residues and their bioconversion into single cell protein using microorganisms as well as the recovery of the valuable by products. It also explores the benefits and potential drawbacks of single cell protein with an emphasis on the economic advantages of such processes. Given its multidisciplinary scope, the book represents a valuable resource for academics and industry practitioners interested in the production of single cell protein from lignocellulosic residues.

Biotechnology Jean L. Bellows, 1986 Toxicity Bibliography, 1976 Annual Reports on Fermentation Processes George T. Tsao, 2014-12-01

Annual Reports on Fermentation Processes Volume 7 deliberates the significant developments in fermentation processes. This book discusses the production and applications of *Trichoderma reesei* cellulase, microbial utilization of gaseous alkanes and growth of mycelium and mushroom. The immobilized cells in sensing devices, economic aspects of fermentation processes and impact of biotechnology on the health care industry are also elaborated. This text likewise covers the industrial mammalian cell culture, microbial biomass from renewables and by products from lignocellulosic materials. Other topics include the MB production by mixed cultures, costs of fermentation processes and fermentations classified by carbon substrate. This volume is a good reference for students and researchers interested in fermentation research and developments.

Advances in Applied Microbiology, 1978-01-10

Advances in Applied Microbiology *Biochemical Aspects of New Protein Food* Jens Adler-Nissen, Bjørn O. Eggum, Lars Munck, 2014-05-18

Biochemical Aspects of New Protein Food examines the biochemical aspects of the use and consumption of new protein foods and determine future areas for research by biochemists. The symposium showcases the presentation of biochemical research that provides a better understanding of the characteristics of new protein foods, their methods of production and solutions to problems in the evaluation of their nutritive properties. Chapters are devoted to the novel and conventional protein foods in the future production of food from waste and a comparative analysis of protein situation in developed versus developing countries. It is hoped that the symposium will be able to help overcome the problems of acceptability of the new foods and catapult it as an important part of human diet. Biochemists, food technologists, biologists and food manufacturers will find the book interesting and informative.

Handbook of Applied Mycology Arora, 1991-08-02

This volume supplements the other books on this subject by providing much information that is not readily available elsewhere. It opens with a taxonomy of fungi in foods and feeds and then considers ecology, spoilage and mycotoxin production by fungi in foods and feeds. This is followed by a series

Biotechnology: Economic and Social Aspects E. J. DaSilva, C. Ratledge, A. Sasson, 1992-04-30

This book was first published in 1992. This book deals with an area of great importance: the issues involved in developing biotechnologically based industries in the developing countries. The science and most of the techniques are well established and it is often possible to obtain the desired finance. This book, however, examines the sort of choices that a developing country has to make as to whether to go ahead with any of the projects outlined in the book and their likely socio-economic consequences. Each chapter is written by experts in their field and discusses the current

biotechnologically based industries and their state of development their suitability for various economies and the problems associated with developing them Chapters discuss environmental questions and further socio economic factors that need to be considered in order to bring about successful wealth creation in these countries This book will be invaluable reading for all those interested in biotechnology and its application to the developing world *Biotechnology and Food Ingredients* Israel Goldberg, Richard Williams, 1991-02-28 Reviews the successful cases of developing food ingredients by biotechnological processes as a sort of catalogue for people in the food industry Describes the production of proteins vitamins enzymes flavors colors and other ingredients using traditional genetic engineering and entirely new technologies Chapters discuss the various products and sources methodologies and regulation Annotation copyrighted by Book News Inc Portland OR

Biochemistry and Genetics Ching T. Hou, 2018-01-18 This book offers a comprehensive examination of the microbiology biochemistry genetics and applied aspects of methylophiles This book is intended for reference purposes at the professional level and for students at the graduate level It is hoped that it will provide researchers with not only basic science but also applied aspects of methylophiles

Use of Yeast Biomass in Food Production Anna Halasz, Radomir Lasztity, 2017-09-29 Yeast biomass is an excellent source of proteins nucleic acids and vitamins It has been produced and consumed in baked goods and other foods for thousands of years and offers significant advantages when compared to other potential new microbial protein sources Use of Yeast Biomass in Food Production provides up to date information regarding the chemical composition and biochemistry of yeasts discusses the biotechnological basis of yeast production and possibilities for influencing yeast biomass composition using new techniques in molecular biology The book examines techniques for producing yeast protein concentrates and isolates while still retaining their functional properties and nutritive values as well as the various uses for these materials and their derivatives in different branches of the food industry Finally the book explores possibilities for the production and industrial use of other yeast components such as nucleic acids nucleotides cell wall polysaccharides autolysates and extracts Food microbiologists and technologists as well as biotechnologists will discover that this book is an invaluable reference resource
