Understanding Digital Technologies and Young Children Susanne Garvis, Narelle Lemon, 2015-09-08. Understanding Digital Technologies and Young Children explores the possibilities digital technology brings to enhance the learning and developmental needs of young children. Globally the role of technology is an increasingly important part of everyday life. In many early childhood education frameworks and curricula around the world there is an expectation that children are developing skills to become effective communicators and are using digital technology to investigate their ideas and represent their thinking. This means that educators throughout the world are expected to actively enhance children's learning in ways that provide learning experiences with technology that are balanced and purposeful to allow the transformation of traditional authentic learning experiences. Digital technologies can be used to explore, manipulate, discover, play and interact with real and imaginative worlds to allow active meaning making. With a wide range of expert contributors, this book provides a comprehensive examination of the current research on technology and young children and the importance of engagement for learning. This approach encourages the reader to rethink the possibilities and potential of digital technologies for learning in the early years, especially in the years before formal schooling when children might be attending early childhood settings. This will be a valuable reference for anyone looking for an international perspective on digital technology and young children and is particularly aimed at current and future teachers.

Childhood Cultures in Transformation, 2020-11-16. This book investigates and uncovers paradoxes and ambivalences that are actualised when seeking to make the right choices in the best interests of the child. The 1989 United Nations Convention on the Rights of the Child established a milestone for the 20th century. Many of these ideas still stand but time calls for new reflections, empirical descriptions and knowledge as provided in this book. Special attention is directed to the conceptualisation of children and childhood cultures, the missing voices of infants and fragile children as well as transformations during times of globalisation and change. All chapters contribute to understand and discuss aspects of societal demands and cultural conditions for modern day children, age 0-18, accompanied by pointers to their future. Contributors are: Eli Kristin Aadland, Wenche Bjorb, Kmo Jorunn Spord, Borgen Gunn, Helene Engelsrud, Kristin Vindhol, Evensen Eldbj, rg Fossgard, Liv Torunn Grindheim, Asle Holthe, Liisa Karlsson, Stinne Gunder, Str m Krogager, Jonatan Leer, Ida Marie Lys, Elin Eriksen, degaard, Czarecah, Tuppil, Oropilla, Susanne H jlund, Pedersen, Anja Maria Pesch, Karen Klitgaard, Povlsen, Gro Rugseth, Pauline von Bonsdorff, Hege Wergedahl and Susanne C Yl nen.

Although geometry has been eclipsed in the mathematics curriculum, research in geometry has blossomed as new ideas have arisen from inside mathematics and other disciplines including computer science. Due to reassessment of the role of geometry, mathematics educators and mathematicians face new challenges. In the present ICMI study, the whole spectrum of teaching and learning of geometry is analysed. Experts from all over the world took part in this study, which was conducted on the basis of recent international research, case studies and reports on actual school practice.
