Merritts Textbook Of Neurology Eighth Edition:

Merritt's Neurology Lewis P. Rowland, Timothy A. Pedley, 2010 The latest neurologic findings are presented here in a crisp clinical focus that incorporates recent advances in the molecular biology of neurologic disease This edition will debut at the Neurological Institute of New York's centennial in the fall of 2009

Foundations of Sport-Related Brain Injuries Semyon M. Slobounov, Wayne J. Sebastianelli, 2006-08-25 This book is the partial product of a conference on concussion in athletics held at the Pennsylvania State University April 29-30, 2004 For a number of reasons it seemed timely to hold such a conference as well as to condense our current understanding of mechanisms, predispositions and latest developments in evaluation and management of sport-related concussions in a single book format Despite dramatic advances in medicine, traumatic brain injury, commonly known as concussion, is still one of the most puzzling and least understood injuries facing the sport medicine world today There is still no universal agreement assigning the level of severity of the sport-related concussions nor is there any treatment besides the passage of time Medicine's inability to fully understand concussion has led us to question when it is truly safe to return an athlete to full sport participation so that the threat for risk of re-injury is minimized The need for a multidisciplinary approach to understanding the sport-related concussions stems from recent evidence that there are long-lasting residual behavioral, psychosocial and neural disabilities that are often overlooked using current research methods The notion of transient and rapid symptoms resolution is misleading since symptoms resolution is frequently not indicative of injury resolution There are no two traumatic brain injuries alike in mechanism, symptomatology or symptoms resolution Most grading scales are based on loss of consciousness and post-traumatic amnesia, both of which occur infrequently in sport-related mild traumatic brain injuries

The Psychiatric Mental Status Examination Paula T. Trzepacz, Robert W. Baker, 1993-08-19 Developed from years of teaching psychiatry to medical students and residents, this comprehensive text devoted solely to describing the mental status examination (MSE) fills a void in the teaching literature and will be valuable to both students first learning about the MSE and seasoned clinicians seeking an informative reference The introductory chapter offers basic advice on interviewing patients and eliciting information Six major sections of the MSE follow and are thoroughly described with a chapter devoted to each: Appearance, Attitude, Activity, Mood and Affect, Speech and Language, Thought Content, Thought Process and Perception, Cognition and Insight and Judgment Each chapter lists a detailed definition of reference for students describing their findings and are an insightful review even for experienced practitioners The clinical relevance of mental status abnormalities is illustrated through frequent examples of disorders that can cause the particular signs and symptoms defined in each chapter A final chapter describing fictional case histories with hypothetical examples of written mental status reports will be particularly useful for those learning to write such reports This text is an important addition to the libraries of students and practitioners who work with psychiatric patients and should help to simplify and organize a challenging task

Core Readings in Psychiatry Michael H. Sacks, William H. Sledge, 1995 Core

The contributors are distinguished experts who have a firm grasp of the relevant and classical citations in specific areas of psychiatry.
