Parent,2015-03-13 Comparative Biology of the Normal Lung Second Edition offers a rigorous and comprehensive reference for all those involved in pulmonary research This fully updated work is divided into sections on anatomy and morphology physiology biochemistry and immunological response It continues to provide a unique comparative perspective on the mammalian lung This edition includes several new chapters and expanded content including aging and development of the normal lung mechanical properties of the lung genetic polymorphisms the comparative effect of stress of pulmonary immune function oxygen signaling in the mammalian lung and much more By addressing scientific advances and critical issues in lung research this 2nd edition is a timely and valuable work on comparative data for the interpretation of studies of animal models as compared to the human lung Edited and authored by experts in the field to provide an excellent and timely review of cross species comparisons that will help you interpret and compare data from animal studies to human findings Incorporates lung anatomy and physiology cell specific interactions and immunological responses to provide you with a single and unique multidisciplinary source on the comparative biology of the normal lung Includes new and expanded content on neonatal and aged lungs developmental processes cell signaling antioxidants airway cells safety pharmacology and much more Section IV on Physical and Immunological Defenses has been significantly updated with 9 new chapters and an increased focus on the pulmonary immunological system **Intensive Care Medicine**

Smyth,Anthony J. Hickey,2011-06-24 The pace of new research and level of innovation repeatedly introduced into the field of drug delivery to the lung is surprising given its state of maturity since the introduction of the pressurized metered dose inhaler over a half a century ago It is clear that our understanding of pulmonary drug delivery has now evolved to the point that inhalation aerosols can be controlled both spatially and temporally to optimize their biological effects These abilities include controlling lung deposition by adopting formulation strategies or device technologies and controlling drug uptake and release through sophisticated particle technologies The large number of contributions to the scientific literature and variety of excellent texts published in recent years is evidence for the continued interest in pulmonary drug delivery research This reference text endeavors to bring together the fundamental theory and practice of controlled drug delivery to the airways that is unavailable elsewhere Collating and synthesizing the material in this rapidly evolving field presented a challenge and ultimately a sense of achievement that is hopefully reflected in the content of the volume **Lung Surfactant Function and Disorder** Kaushik Nag,2005-05-13 The only source to describe the lung surfactant as a complex membranous system this guide analyzes lung surfactant function from the aspects of molecular biology biophysics membrane science and surface and interface analysis and reviews the latest basic and clinical issues relating to lung disease and dys function **Current Research in Chronic Airways Obstruction** ,1968 Advances in Clinical Chemistry ,1987-08-04 *Advances in Clinical Chemistry* *Current Research in Chronic Airways Obstruction* David L. Witschi,J.D. Brain,2012-12-06 This book deals with the methods and scientific basis of inhalation toxicology It describes devices and

facilities needed to expose animals to inhaled particles and gases as well as approaches to estimating or measuring the fraction of the inhaled material that is retained in the respiratory tract The book then reviews the evergrowing repertoire of techniques that can be used to measure the responses elicited by the exposure Quantitative and qualitative anatomical physiological and biochemical strategies are discussed in detail We believe that the toxicology of inhaled materials is an important and timely topic for several reasons During the past decade morbidity and mortality attributable to cardiovascular disease have significantly decreased Progress in combatting cancer the second most important cause of death has been slower and lung cancer actually became the leading cause of death in men and the second leading cause of cancer death in women In addition the incidence of non neo plastic respiratory diseases such as emphysema fibrosis and chronic bronchitis has increased the past decade In the United States the National Institutes of Health NIH has recently reported that chronic obstructive pulmonary disease affects nearly 10 million persons and accounts for 59 000 deaths yearly indeed it ranks as the fifth leading cause of death Because the incidence is increasing the NIH estimates that it may become the nation s fourth or even third leading cause of death by the year 2000
