Metabolic Regulation In Mammals David M. Gibson, Professor David Gibson, Robert Harris, Peter Roach, 2002-01-01 Metabolic Regulation in Mammals presents the basic principles of metabolic control based on investigations conducted during the past twenty years It explains the impact of recent advances in cell biology molecular biology and genetics on the field Beginning with the basic concepts this text covers all angles of metabolic regulation including blood caloric homeostasis cardiac and skeletal muscle adipose tissue and liver metabolism Review questions summary sections and worked examples help break down the complexity of the subject and allow the reader to review the principles and concepts presented Details of metabolic pathways are provided for each body system with accompanying charts to provide the reader with an overall perspective This text is ideal for undergraduates across a range of biological and health science disciplines particularly those taking one or two semester courses in metabolic regulation Metabolic Regulation in Mammals David Gibson, Robert A. I. Pogson, 1976 *Principles of Metabolic Control in Mammalian Systems* Herman, 2013-11-11 In this work we present the basic principles of metabolic control which we hope will serve as a foundation for the vast array of factual matter which the biochemist and the physician engaged in metabolic research must accumulate Accordingly we attempt to set forth these principles along with sufficient explanation so that the reader may apply them to the ever expanding literature of biochemistry If we are successful this will provide a theoretical approach which can be applied to any given set of metabolic reactions It is impossible to enumerate each and every biochemical reaction and pathway since such a work would be too unwieldy for efficient use Rather we hope our presentation of the principles of metabolic control will be sufficiently basic to be of lasting usefulness no matter how detailed biochemistry may become We would like to be able to condense biochemistry into a theoretical biology that will not only allow for the general treatment of any given reaction but will enable predictions to be made as to the existence of necessary pathways and the consequences of altered control Such is not possible today but this may be accomplished in the future We believe it is now possible to institute the beginnings of such a theoretical biology **Research Awards Index**, 1986 Research Grants
